The Myth of the Framework Karl Popper, 2014-04-23 In a career spanning sixty years Sir Karl Popper has made some of the most important contributions to the twentieth century discussion of science and rationality *The Myth of the Framework* is a new collection of some of Popper's most important material on this subject Sir Karl discusses such issues as the aims of science the role that it plays in our civilization the moral responsibility of the scientist the structure of history and the perennial choice between reason and revolution In doing so he attacks intellectual fashions like positivism that exaggerate what science and rationality have done as well as intellectual fashions like relativism that denigrate what science and rationality can do Scientific knowledge according to Popper is one of the most rational and creative of human achievements but it is also inherently fallible and subject to revision In place of intellectual fashions Popper offers his own critical rationalism a view that he regards both as a theory of knowledge and as an attitude towards human life human morals and democracy Published in cooperation with the Central European University *Project Management for the Oil and Gas Industry* Adedeji B. Badiru, 2025-05-01 A lot of managerial finessing is needed to handle the present era of the operations of the oil and gas industry under the pressure of environmental issues The recent emergence of the techniques of Agile systems offers a tremendous collection of new approaches for addressing the managerial impediments to oil and gas operations *Agile Systems and Environmental Concerns* covers how Agile systems are based on principles that emphasize team collaboration continual planning and continual learning thus making an operation more responsive and adaptive to operational changes Agile is an iterative approach to project management that helps teams achieve results faster and more accurately This volume contains a variety of Agile management tools and techniques to address communication cooperation and coordination requirements related to risk management and environmental issues ideal for practitioners designers consultants contractors risk and quality managers along with project managers and systems engineers involved in oil and gas projects and related industries This book is also available as a set *Project Management for the Oil and Gas Industry A Global System Approach* 9781032646046 [Large-Scale Machine Learning in the Earth Sciences](#) Ashok N. Srivastava, Ramakrishna Nemani, Karsten Steinhaeuser, 2017-08-01 From the Foreword While large scale machine learning and data mining have greatly impacted a range of commercial applications their use in the field of Earth sciences is still in the early stages This book edited by Ashok Srivastava Ramakrishna Nemani and Karsten Steinhaeuser serves as an outstanding resource for anyone interested in the opportunities and challenges for the machine learning community in analyzing these data sets to answer questions of urgent societal interest I hope that this book will inspire more computer scientists to focus on environmental applications and Earth scientists to seek collaborations with researchers in machine learning and data mining to advance the frontiers in Earth sciences Vipin Kumar University of Minnesota *Large Scale Machine Learning in the Earth Sciences* provides researchers and practitioners with a broad overview of some of the key challenges in the intersection of Earth science computer science

statistics and related fields It explores a wide range of topics and provides a compilation of recent research in the application of machine learning in the field of Earth Science Making predictions based on observational data is a theme of the book and the book includes chapters on the use of network science to understand and discover teleconnections in extreme climate and weather events as well as using structured estimation in high dimensions The use of ensemble machine learning models to combine predictions of global climate models using information from spatial and temporal patterns is also explored The second part of the book features a discussion on statistical downscaling in climate with state of the art scalable machine learning as well as an overview of methods to understand and predict the proliferation of biological species due to changes in environmental conditions The problem of using large scale machine learning to study the formation of tornadoes is also explored in depth The last part of the book covers the use of deep learning algorithms to classify images that have very high resolution as well as the unmixing of spectral signals in remote sensing images of land cover The authors also apply long tail distributions to geoscience resources in the final chapter of the book
