SolidWorks is an immense software package and no one book can cover all topics for all users. This book provides a centralized reference location to address many of the tools, features, and techniques of SolidWorks 2013. This book covers the following: System and Document properties, FeatureManagers, PropertyManagers, ConfigurationManagers, RenderManagers, 2D and 3D Sketch tools, Sketch entities, 3D Feature tools, Motion Study, Sheet Metal, Motion Study, Sustainability, Sustainability Xpress, FlowXpress, PhotoView 360, Pack and Go, Intelligent Modeling techniques, and more. Each chapter (18 total) provides detailed PropertyManager information on key topics with individual stand-alone short tutorials to reinforce and demonstrate the functionality and ease of the SolidWorks tool or feature. All models for the 240 plus tutorials are located on the enclosed book CD with their solution initial and final. Learn by doing, not just by reading. Formulate the skills to create, modify, and edit sketches and solid features. Learn the techniques to reuse features, parts, and assemblies through symmetry, patterns, copied components, design tables, configurations, and more. The book is designed to compliment the Online Tutorials and Online Help contained in SolidWorks 2013. The goal is to illustrate how multiple design situations and systematic steps combine to produce successful designs. The authors developed the tutorials by combining their own industry experience with the knowledge of engineers, department managers, professors, vendors, and manufacturers. These professionals are directly involved with SolidWorks everyday. Their responsibilities go far beyond the creation of just a 3D model.

**Global environmental footprints** Peters, Glen P.,Andrew, Robbie M.,Karstensen, Jonas,2016-08-09 Emissions and resources are typically allocated to national territories There has been increased interest in allocating environmental flows to the final consumption of goods and services The resulting environment footprints are particularly relevant for global environmental problems in a globalised world Developed

countries generally have larger environmental footprints than their national territorial flows and the gap has tended to increase over the last two decades. Consequently some have argued that environmental policies should address the environmental footprint. Despite the potential policy relevance there has been relatively little research on policy applications. While environmental footprints have many advantages policy applications are limited by estimation and interpretation uncertainty and by the lack of a clear policy motivation.

**How to Live a Low-Carbon Life**

Christopher Goodall, 2012-05-04

Climate change is the greatest challenge facing humanity. Drastic reduction of carbon emissions is vital if we are to avoid a catastrophe that devastates large parts of the world. Governments and businesses have been slow to act and individuals now need to take the lead. The Earth can absorb no more than 3 tonnes of carbon dioxide emissions each year for every person on the planet if we are to keep temperature and rainfall change within tolerable limits. Yet from cars and holiday flights to household appliances and the food on our plates, Western consumer lifestyles leave each of us responsible for over 12 tonnes of carbon dioxide a year, four times what the Earth can handle. Individual action is essential if we want to avoid climate chaos. *How to Live a Low Carbon Life* shows how easy it is to take responsibility.

providing the first comprehensive one stop reference guide to calculating your CO2 emissions and reducing them to a sustainable 3 tonnes a year
