

The background of the cover is a dark, almost black, space filled with intricate, colorful geometric patterns. These patterns consist of numerous thin, radiating lines that form fan-like or cone-like shapes, pointing towards the center. The colors used for these lines and dots include shades of teal, orange, purple, and grey. The overall effect is one of dynamic movement and complex, interconnected structures, reminiscent of a network or a data visualization.

Misleading Evidence and Evidence-Led Policy Lawrence W. Sherman, 2003-09 Research evidence can and should have an important role in shaping public policy Just as much of the medical community has embraced the concept of evidence based medicine increasing numbers of social scientists and government agencies are calling for an evidence based approach to determine which social programs work and which ones don t It is an irony not lost on the social scientists writing for the September volume of *The Annals* that the first use of experimental methods in medicine to test the effects of Streptomycin on tuberculosis in the late 1940s was actually conducted by an economist But while more than one million clinical trials in medicine have been conducted since that time only about 10 000 have been conducted to evaluate whether social programs achieve their

intended effects Authors of the September volume argue that this level of investment in the gold standard of research designs is insufficient for a wide range of reasons Randomized controlled trials for example are far better at controlling selection biases and chance effects than are other observational methods while econometric and statistical techniques that seek to correct for bias fall short of their promise The volume dramatically demonstrates that alternative methods generate different and often substantially wrong estimates of program effects Some research based on nonexperimental research designs actually mislead policy makers and practitioners into supporting programs that don t work while ignoring others that do Authors of this volume also directly address critiques of experimental designs which range from questions about their practicality to their ethics Some of these arguments are well taken but addressable The authors however reject other arguments against controlled tests as unfounded and damaging to social science Policymakers will find these articles invaluable in better understanding how alternative research methods can mislead as much as enlighten Students and researchers will be confronted with powerful arguments that question the use of nonexperimental techniques to estimate program effects This volume throws the gauntlet down We challenge you to pick it up *Read More - Read Better?* Marta Lewis,2002 **Research Methods for Social Psychology** Dana Dunn,2009 Research Methods for Social Psychology teaches students to think like an experimental social psychologist Striking a balance between theoretical sophistication and hands on activities and exercises this engaging text offers a friendly approach to methodology and a successful means of motivating students to design and execute their own social psychological research Active learning activities on social psychology in each chapter as well as thought exercises at the end of each chapter Guidance on developing social psychology research topics advice on ethics reviews of research projects instructions on how to design independent and dependent variables and assistance with performing a post experimental interviews with participants A stand alone chapter on basic data analysis in addition to directions for putting statistical results into words Guidance on writing APA style summaries of social psychology experiments as well as giving oral and poster presentations includes a sample annotated APA style lab report Instructor test bank with questions and answers for each chapter available at www.wiley.com/go/dunn **Seven Rules for Social Research** Glenn Firebaugh,2008 Effects as nuisance Critical tests in social research Conclusion Student exercises on Rule 7 **Journal of Management** Southern Management Association,2003 **Encyclopedia of Measurement and Statistics** Neil J.
