Amato, Wesley Huang, Bud Mishra, 2008-07-10 Algorithms are a fundamental component of robotic systems they control or reason about motion and perception in the physical world They receive input from noisy sensors consider geometric and physical constraints and operate on the world through imprecise actuators The design and analysis of robot algorithms therefore raises a unique combination of questions in control theory computational and differential geometry and computer science This book contains the proceedings from the 2006 Workshop on the Algorithmic Foundations of Robotics This biannual workshop is a highly selective meeting of leading researchers in the field of algorithmic issues related to robotics The 32 papers in this book span a wide variety of topics from fundamental motion planning algorithms to applications in medicine and biology but they have in common a foundation in the algorithmic problems of robotic systems      **Grain World** , 1924

**Scalable and Efficient Probabilistic Topic Model Inference for Textual Data** Måns Magnusson, 2018-04-27

Probabilistic topic models have proven to be an extremely versatile class of mixed membership models for discovering the thematic structure of text collections There are many possible applications covering a broad range of areas of study technology natural science social science and the humanities In this thesis a new efficient parallel Markov Chain Monte Carlo inference algorithm is proposed for Bayesian inference in large topic models The proposed methods scale well with the corpus size and can be used for other probabilistic topic models and other natural language processing applications The proposed methods are fast efficient scalable and will converge to the true posterior distribution In addition in this thesis a supervised topic model for high dimensional text classification is also proposed with emphasis on interpretable document prediction using the horseshoe shrinkage prior in supervised topic models Finally we develop a model and inference algorithm that can model agenda and framing of political speeches over time with a priori defined topics We apply the approach to analyze the evolution of immigration discourse in the Swedish parliament by combining theory from political science and communication science with a probabilistic topic model Probabilistiska mnesmodeller topic models r en m ngsidig klass av modeller f r att estimera mnessammans ttningar i st rre corpusar Applikationer finns i ett flertal

vetenskapsområden som teknik naturvetenskap samhällsvetenskap och humaniora I denna avhandling presenteras nya effektiva och parallella Markov Chain Monte Carlo algoritmer för Bayesianiska mnesmodeller De presenterade metoderna skalar väl med storleken på corpuset och kan användas för flera olika mnesmodeller och liknande modeller inom språkteknologi De presenterade metoderna är snabba effektiva skalbara och konvergerar till den sanna posteriorfördelningen Dessutom presenteras en mnesmodell för högdimensionell textklassificering med tonvikt på tolkningsbar dokumentklassificering genom att använda en kraftigt regulariserande priorfördelning Slutligen utvecklas en mnesmodell för att analysera agenda och framing för ett förutbestämt ämne Med denna metod analyserar vi invandringsdiskursen i Sveriges Riksdag varje tid genom att kombinera teori från statsvetenskap kommunikationsvetenskap och probabilistiska mnesmodeller *International Milk Dealer*, 1914
