**Predictive Control for Nonlinear Continuous-Time Systems with and Without Time-Delays** Marcus Reble, 2013 The objective of this thesis is the development of novel model predictive control MPC schemes for nonlinear continuous time systems with and without time delays in the states which guarantee asymptotic stability of the closed loop The most well studied MPC approaches with guaranteed stability use a control Lyapunov function as terminal cost Since the actual calculation of such a function can be difficult it is desirable to replace this assumption by a less restrictive controllability assumption For discrete time systems the latter assumption has been used in the literature for the stability analysis of so called unconstrained MPC i e MPC without terminal cost and terminal constraints The contributions of this thesis are twofold In the first part we propose novel MPC schemes with guaranteed stability based on a controllability assumption whereas we extend different MPC schemes with guaranteed stability to nonlinear time delay systems in the second part In the first part of this thesis we derive explicit stability conditions on the prediction horizon as well as performance guarantees for unconstrained MPC Starting from this result we propose novel alternative MPC formulations based on combinations of the controllability assumption with terminal cost and terminal constraints One of the main contributions is the development of a unifying MPC framework which allows to consider both MPC schemes with terminal cost and terminal constraints as well as unconstrained MPC as limit cases of our framework In the second part of this thesis we show that several MPC schemes with and without terminal constraints can be extended to nonlinear time delay systems Due to the infinite dimensional nature of these systems the problem is more involved and additional assumptions are required in the controller design We investigate

different MPC schemes with and without terminal constraints and or terminal cost terms and derive novel stability conditions Furthermore we pay particular attention to the calculation of the involved control design parameters *Bradley and Daroff's Neurology in Clinical Practice - E-Book* Joseph Jankovic, John C.
