of Labelled Non Classical Logics is the development and investigation of a framework for the modular and uniform
presentation and implementation of non classical logics in particular modal and relevance logics Logics are presented as
labelled deduction systems which are proved to be sound and complete with respect to the corresponding Kripke style
semantics We investigate the proof theory of our systems and show them to possess structural properties such as
normalization and the subformula property which we exploit not only to establish advantages and limitations of our approach
with respect to related ones but also to give by means of a substructural analysis a new proof theoretic method for
investigating decidability and complexity of some of the logics we consider All of our deduction systems have been
implemented in the generic theorem prover Isabelle thus providing a simple and natural environment for interactive proof
