Rare Earth and Transition Metal Doping of Semiconductor Materials Volkmar Dierolf, Ian Ferguson, John M Zavada, 2016-01-23 Rare Earth and Transition Metal Doping of Semiconductor Material explores traditional semiconductor devices that are based on control of the electron's electric charge This book looks at the semiconductor materials used for spintronics applications in particular focusing on wide band gap semiconductors doped with transition metals and rare earths These materials are of particular commercial interest because their spin can be controlled at room temperature a clear opposition to the most previous research on Gallium Arsenide which allowed for control of spins at supercold temperatures Part One of the book explains the theory of magnetism in semiconductors while Part Two covers the growth of semiconductors for spintronics Finally Part Three looks at the characterization and properties of semiconductors for spintronics with Part Four exploring the devices and the future direction of spintronics Examines materials which are of commercial interest for producing smaller faster and more power efficient computers and other devices Analyzes the theory behind magnetism in semiconductors and the growth of semiconductors for spintronics Details the properties of semiconductors for spintronics

Proceedings of the 17th International Conference on the Physics of Semiconductors J.D. Chadi, W.A. Harrison, 2013-12-01 The Proceedings of the 17th International Conference on the Physics of Semiconductors are contained in this volume A record 1050 scientists from 40 countries participated in the Conference which was held in San Francisco August 6 1 0 1984 The Conference was organized by the ICPS Committee and sponsored by the International Union of Pure and Applied Physics and other professional government and industrial organizations listed on the following pages Papers representing progress in all aspects of semiconductor physics were presented Far more abstracts 765 than could be presented in a five day meeting were considered by the International Program Committee A total of 350 papers consisting of 5 plenary 35 invited and 310 contributed were presented at the Conference in either oral or poster sessions All but a few of the papers were submitted and have been included in these Proceedings An interesting shift in subject matter in comparison with earlier Conferences is manifested by the large number of papers on surfaces interfaces and quantum wells To facilitate the use of the Proceedings in finding closely related papers among the sometimes relatively large number of contributions within a main subject area we chose not to arrange the papers strictly according to the Conference schedule We have organized the book as can be seen from the Contents into specific subcategories and subdivisions within each major category Plenary and invited papers have been placed together with the appropriate contributed papers
