*Understanding Language Acquisition* Christina E. Erneling, 1993-01-01 How is language acquisition possible How is it that humans within a few years of birth can speak and understand language transcending both its limited experience and biological limitations In this challenge to the narrow confines of psychology and philosophy Christina Erneling argues that language acquisition results

from the interaction between linguistic creativity inherent in language and a biological and social framework of learning Erneling explains and critically analyzes the idea that language acquisition requires a meaningful language of thought contrasting this with Wittgenstein's ideas on language and learning Erneling shows that the assumptions in J Fodor's development of Chomsky's ideas into a theory of language of thought have significantly influenced developmental theories yet fail to resolve the conflict between linguistic creativity and the necessity of a framework for learning She argues that the later Wittgenstein was more concerned with the conditions of learning than is generally appreciated and shows how his remarks can be developed into an alternative approach to language learning Understanding Language Acquisition has profound implications for evaluating hidden metatheoretical assumptions as well as for empirical research and methods for teaching language and treating language disorders

*Evolutionary Foundations of Learning and Cognition* Georgian Federation of Psychologists Academic Team, The field of evolutionary psychology has provided invaluable insights into the origins and mechanisms underlying human learning and cognition At its core this paradigm proposes that the architecture of the mind is the product of specific and recurrent selection pressures acting over deep evolutionary time Shackelford Liddle 2014 From this perspective the human mind is not a blank slate but rather a set of specialized computational mechanisms designed to solve adaptive problems faced by our hunter gatherer ancestors Shackelford Liddle 2014 Evolutionary psychologists argue that attention to adaptive function is key to understanding the design of the human mind They posit that the principles underlying biological evolution such as random mutation and natural selection can be applied to the development of human knowledge and problem solving Sweller Sweller 2006 This view suggests that long term memory functions akin to a genome with learning from others analogous to biological reproduction Similarly working memory when processing novel information can be viewed as an epigenetic system managing environmental information while long term working memory is the epigenetic system s management of genomic information Sweller Sweller 2006 This integrated perspective on the nature of human learning and thought has important implications for how we approach the presentation and acquisition of information The suggestion that the development of human knowledge and biological evolution by natural selection share a common underlying base can be traced back to the ideas of Charles Darwin and has since gained significant traction in the field of evolutionary psychology Cosmides Tooby 2005 The core theoretical assumptions of evolutionary psychology as well as the significant empirical findings that have emerged from this approach offer a powerful framework for unifying the currently disparate subdisciplines of psychological science
