**The Elements of Modern Architecture** Antony Radford, Amit Srivastava, Selen B Morkoc, 2014-06-17 Fifty of the world's greatest modern buildings from 1950 to the present dissected and analyzed through specially commissioned freehand drawings After a period in which computation derived architecture driven by digital design tools data analysis and new formal expression has thrived students and their teachers have returned to age old techniques before employing the digital tools that are a part of every architect's studio Tired of the perfectly rendered screen image architects are making presentations that are clearly the work of the hand and the mind not the computer This ambitious publication organized chronologically is aimed at a new generation of architects who take technology for granted but seek to further understand the principles of what makes a building meaningful and enduring Each of the fifty works of architecture is presented through detailed consideration of its site topology and surroundings natural light volumes and massing program and circulation details fenestration and ornamentation Over 2 500 painstakingly hand drawn images of the buildings of the past seven decades help readers return to the core values of understanding site and creating buildings looking with the eyes engaging through direct physical experience and constructing by hand *Understanding Modern Architecture* Patrick Nuttgens, 1988

art theorists this book puts forward an innovative interpretative method of decoding the forms and spaces of Modern buildings This method was first developed as scholars realized that the new abstract art appearing needed to be analysed differently than the previous figurative works Since architecture experienced a similar development in the 1920s and 30s this book argues that the empathetic method can also be used in architectural interpretation While most existing scholarship tends to focus on formal and functional analysis this book proposes that Modern architecture is too diverse to be reduced to a few common formal or ornamental features Instead by relying on the viewer's innate psycho physiological perceptive abilities sensual and intuitive understandings of composition form and space are emphasized These aspects are especially significant because Modern Architecture lacks the traditional stylistic signs Including building analyses it shows how by visually reducing cubical forms and spaces to linear configurations the exteriors and interiors of Modern buildings can be interpreted via human perceptive abilities as dynamic movement systems commensurate with the new industrial transportation age This reveals an inner necessity these buildings express about themselves and their culture rather than just an explanation of how they are assembled and how they should be used The case studies highlight the contrasts between buildings designed by different architects rather than concentrating on the few features that relate them to the zeitgeist It analyses the buildings directly as the objects of study not indirectly as designs filtered through a philosophical or theoretical discourse The book demonstrates that with technology and science affecting culture
