Explanation and Experiment in Social Psychological Science John D. Greenwood, 2012-12-06 This book is about explanation and experiment in a science of human action It aims to provide a philosophy of social psychological science that both embodies sound principles of scientific reasoning and is sensitive to the social psychological dimensions of human action The guiding principle of this book is the belief that the logical forms of causal explanation and experimental evaluation can be effectively employed in the scientific analysis of meaningful human action According to most accounts social psychological science has been in a more or less constant state of crisis for the past decades having been subject to a host of criticisms on moral political methodological and philosophical grounds Many of these critiques have been directed against the still dominant conception of social psychological enquiry as a causal and objective scientific discipline that is closely analogous to if not to be identified as a branch of the natural sciences Thus many of the most vigorous debates have concerned the nature of explanation and the utility of experimentation in a social psychological discipline
