

# Lesson 9: Thermal Physics

## Thermal concepts

### *Conduction, convection and thermal radiation*

- When two solids of different temperatures touch, thermal energy is transferred from the hotter object to the cooler object through a process called **conduction**.
- When atoms of one portion of a material are in contact with vibrating atoms of another portion, the vibration is transferred from atom to atom.

**Direction of heat flow**

- High  $T$  portions vibrate more than low  $T$  portions, so we can imagine the vibration “impulse” to travel through the material, from high  $T$  to low  $T$ .
