**Organising Waste in the City** Zapata, María José,Hall,

Michael, 2013-05-30 This book offers a critical perspective on the issue of organising waste in cities which has often been positioned in terms of relatively narrow engineering economic and physical science approaches It emphasises the ways in which the notion of waste and the narratives and discourses associated with it have been socially constructed with corresponding implications for waste governance and local waste handling practices Organising waste in the city takes a broad and international approach to the ways in which the issue of waste is framed and brings together narratives from cities as diverse as Amsterdam Bristol Cairo Gothenburg Helsingborg and Managua Organised into four main sections and with an integrative introduction and conclusion the book not only provides new insights into the hidden stories of urban and municipal household solid waste and waste landscapes but also connects concerns regarding urban waste to such issues as globalisation governance urban ecology and social economic and environmental justice Waste Management and Resource Recovery Charles R. Rhyner, Leander J. Schwartz, Robert B. Wenger, Mary G. Kohrell, 1995-08-31 This book provides a basic understanding of waste management problems and issues faced by modern society Scientific technical and environmental principles are emphasized to illustrate the processes of municipal and industrial solid wastes and liquid wastes and the nature of impacts resulting from waste dispersal and disposal in the environment Economic social legal and political aspects of waste management are also addressed Environmental issues and concerns receive thorough coverage in discussing waste reduction resource recovery and efficient and practical waste disposal systems Other specific topics include recycling physical and chemical processing the biological treatment of waste solids incineration pyrolysis and energy recover hazardous wastes and landfill management The role of government and other institutions in waste management and resource recovery matters is also detailed Discussion questions worked examples and end of chapter problems reinforce important concepts Waste Management and Resource Recovery is particularly suitable as a text in waste management courses in environmental science or engineering programs It also works well as a reference for practitioners in the waste management field *WRAP, a Model for Regional Solid Waste Management Planning* Mitre Corporation, 1977 *Modern Solid Waste Management in Practice* Anna Bernstad Saraiva Schott, Henrik Aspegren, Mimmi Bissmont, Jes la Cour Jansen, 2013-12-17 This book focuses on sustainable solid waste management in an urban context and gives an example of how a modern city can work with waste management for increased sustainability in close cooperation with the academy The book describes challenges which the city is facing and presents a case on how these can be tackled based on several research and development projects performed in the City of Malm over the last decade In these projects the city has worked as a test bed for new solutions developed with and evaluated by the university The projects and evaluations of the same have been developed with a multi dimensional approach including technical aspects resource efficiency economic parameters information strategies towards households and user friendliness Methods used for evaluation are presented in a comprehensive way together with a discussion on how results from performed evaluations have affected the solid waste

management policy making in the city The book describes a bridging over a commonly noticed gap between research on the one hand and policy making and technical management on the other Several examples are given on how academy and real life and full scale developments in the city can have a fruit full collaboration where feed back from evaluation of made changes are used for continuous improvements at the same time as the actual needs from the city forces the academy to develop new methods for evaluations and develop new solutions to previously un known or un addressed problems
