## **Very Long Baseline Interferometry:**

*Very Long Baseline Interferometry* Marcello Felli, Ralph E. Spencer, 2012-12-06 The quest for high resolution has preoccupied radio astronomers ever since radio waves were first detected from space fifty years ago This venture was particularly stimulated by the discovery of quasars and led to the development of interferometer techniques using baselines of transglobal dimensions These methods have become known as Very Long Baseline Interferometry VLBI Arrays of radio telescopes situated all over the Earth or even in space are regularly used for researches in radio astronomy reaching resolutions as small as a fraction of a milli arcsecond The technique also allows the measurement of the positions of the radio telescopes to a few millimeters and so VLBI has become a major tool in geodesy and the study of the rotation of the Earth VLBI has now passed the pioneer stage and is becoming a standard facility available to astronomers and geodesists requiring the coordination of the operations of independently owned radio telescopes around the world In Europe observatories from England Federal Republic of Germany France Italy Poland Sweden and The Netherlands are coordinated in their VLBI activity by the European VLBI Network Consortium EVN The Programme Committee of the EVN allocates time to scientific projects on a routine basis three times a year The United States has a similar arrangement of a network of independent radio observatories and joint experiments using Global Network are often made

**Very Long Baseline Interferometer**  
Fujinobu Takahashi, 2000 VLBI is an acronym for Very Long Baseline Interferometry and can be roughly divided into two areas of application The first area is in geodesy which is covered in considerable detail in this book The second area is in astrometry or radio astronomy which is only briefly treated in the book

**European Very Long Baseline Interferometry (VLBI) Network**, The European Very Long Baseline Interferometry VLBI Network is a collaboration of the major radio astronomical institutes in Europe and Asia The network consists of an interferometric array of radio telescopes that perform high angular resolution observations of cosmic radio sources

**Very Long Baseline Interferometry and the VLBA** J. Anton Zensus, Philip John Diamond, Peter J. Napier, 1995 *Very Long Baseline Interferometry (VLBI) Space Observatory Programme*, Highlights the Very Long Baseline Interferometry VLBI Space Observatory Programme of the Institute of Space and Astronautical Science in collaboration with the National Astronomical Observatory of Japan Includes details on the history and milestones of the program Discusses the satellite and rocket used in the program Offers information and times for observers

*Very Long Baseline Interferometry (VLBI)*, 2007 *International Very Long Baseline Interferometry (VLBI) Service for Geodesy and Astrometry (IVS)*, The International Very Long Baseline Interferometry VLBI Service for Geodesy and Astrometry IVS consists of international organizations that operate and support VLBI components The group provides services to support geodetic geophysical and astrometric research and operational activities Information about the organization's structure products and related services is available

[Very Long Baseline Interferometry of Evolved Binary Systems](#) William M. Peterson, 2011 Our understanding of the magnetic fields of stars is nearly monopolized by knowledge of

our own sun Very long baseline radio interferometry VLBI provides a means of directly imaging the radio coronae of other stars at a high enough resolution to discern discrete features something not possible with other observational methods It also allows the highest positional accuracy of any observational method available This thesis details the VLBI study of two nearby radio loud stars in close binary systems Both systems were observed at numerous epochs spaced over a range of several months with the global scale radio interferometer array the VLBA HSA These observations were combined with archival data from the National Radioastronomy Observatory NRAO Archive The resulting positions as well as previously published positions were used to calculate a least squares solution for all the orbital and astrometric parameters of both systems This made it possible to determine the position of the physical star with respect to the radio emission in each image The images of both stars were found to conform to theoretical emission produced by a model dipolar magnetosphere with a filled or partially filled coronal loop

Wrobel,1994 **An Intercontinental Very Long Baseline Array**,1977 **Very Long Baseline Interferometry (VLBI) in the Arctic** Bjørn Ragnvald Pettersen,1994 Describes Norwegian Mapping Authority s research facility at Ny lesund VLBI uses antennae on several continents simultaneously to observe quasars Technique showed continental drift as by product and can detect vertical motion of earth surface Very Long Baseline Interferometry J. Resolving powers unprecedented in astronomy can be achieved by combining signals from radio telescopes thousands of kilometres apart In addition to its astronomical uses the technique offers a way of checking the theory of relativity Author **The Role of VLBI in Astrophysics, Astrometry and Geodesy** Franco Mantovani,Andrzej Kus,2005-12-31 A masterly survey of the last 13 years of Very Long Baseline Interferometry reviewed in light of the most advanced astronomical observations Topics covered include Nonthermal emission from extragalactic radio sources Principles of synchrotron emission in relation to astrophysics Theory of relativistic jets Young powerful radio sources and their evolution Scintillation in extragalactic radio sources Radio and optical interferometry Radio polarimetry Unified schemes Deep fields Tropospheric and ionospheric phase calibration Supernovae VLBI for geodesy and geodynamics Very Long Baseline Radio Interferometry Using a Geostationary Satellite ,1978 Very Long Baseline Interferometry and the VLBA J A.
