The authors provide a normative approach to global warming that they call sustainability. It consists in finding an economic path that while satisfying environmental and other constraints would maintain human welfare for all future generations. They also explain why the current discounted utilitarian approach is unsatisfactory. The book has many original arguments expressed in a clear logical structure. It should be required reading for graduate students in public economics. Phillippe De Donder, Toulouse School of Economics. This book should be of great interest to economists working in the field of climate change, particularly those who would like to explore alternatives to the dominant paradigm of discounted utilitarianism. Rejecting that paradigm, the authors evaluate climate policy using sustainability criteria requiring either that future generations have the same level of utility as earlier generations or that utility grows by at least a fixed rate. Larry S. Karp, University of California Berkeley.

**The Return of Planet-X** Jaysen Q. Rand, 2007. The Return of Planet X is an educational, informational source examining all aspects of this controversial subject, including the record of X's Ancient Science of Prophecy, its Phantom Astronomy, Forbidden Archaeology, and the Signs of Its Approach. This book examines the history and prophecy of Earth's many cultures throughout the millennia and their voluminous references to the reality of X's periodic passages. The most current hypothesis used to examine X's next return through the solar system centers around the fact that X's extended orbit, approximately every 3,600 years, first passing through the solar system, then back out again, suggests that its destructive cycle occurs in two phases. The first phase begins with X's initial pass through in 2009, separated by three years until its second phase. This passage marks X's return leg back into deep space, beginning again its 3,600-year-long trek through the heavens. X's last return visit through the solar system most likely coincided with the Hebrews' exodus from Egypt, estimated around 1447 BC, roughly 3,459 years ago.
