

3. The engineering valuation model and its estimates

A portfolio of econometric and techno-economic models for the valuation of spectrum has been employed by contemporary studies. The most commonly used models are the opportunity cost approach and the cash flow method. The engineering valuation method, framed by Nera and Smith (1996), is a simple technique for estimating the opportunity cost of spectrum, first used for estimating the administrative incentive price (AIP) of spectrum in the United Kingdom. Koopmans,1970 **Statistical Methods of Econometrics** Edmond Malinvaud,1980 Hardbound This now classic volume

aims at a systematic presentation of the statistical methods used for the analysis of economic data The properties of the

various procedures are studied within the framework of theoretical stochastic models Their relevance for inference on the

economic phenomena is discussed at length This third edition has been updated in many respects Chapter 8 Regression in

Various Contexts has been rewritten and now provides a full discussion of estimation in the linear models with a partially

unknown covariance matrix which introduces a systematic treatment of heteroscedasticity random coefficients and composite

errors A new chapter has been added on simultaneous equation models that are non linear with respect to the endogenous

variables The reader will also find new sections on shrunken estimators on the choice of a model on specification and

estimation for distributed lag equations *Econometric Methods for Postgraduate-Level Research* Zeleke Worku, 2024-05-30

This book is highly recommended for use by postgraduate level students and researchers in the socioeconomic and socio behavioral fields. The book introduces novice researchers to commonly used econometric and statistical methods of data analysis. The methods covered in the book are commonly used for performing quantitative and qualitative data analyses in socioeconomic, demographic, public health, and socio behavioral studies. The book is especially helpful to learners who wish to acquire basic skills in quantitative and qualitative data analysis by using statistical packages such as SPSS and STATA. Theoretical principles are outlined followed by easy numerical examples along with steps that need to be followed for performing data analyses and interpreting results obtained from data analyses. The book has two aspects: quantitative and qualitative data analyses. As part of the quantitative aspect, the book stipulates theoretical principles, steps needed for data analysis, and the interpretation of results of data analyses. The book provides easy examples to follow on how to use the American Psychological Association (APA) citation and referencing style. Examples are provided for journal articles, books, and Internet based reports and sources of information. A sample proposal, a questionnaire of study, and a list of interview questions are provided for learners to follow. These documents are custom made to requirements that apply to postgraduate level studies at Tshwane University of Technology. The book also provides steps on how to use appropriate goodness of fit tests for all procedures of quantitative and qualitative data analysis. Such tests are required for assessing the theoretical reliability of fitted models. As part of the qualitative aspect, the book provides learners a practical example of thematic analysis, which is a commonly used method of qualitative data analysis. The book enables learners to write research proposals and perform quantitative and qualitative methods of data analysis. Raw data sets are used for illustrating theoretical principles. The book performs the analyses of raw data sets in the statistical packages SPSS and STATA. Easy steps that need to be followed by learners are outlined and provided in all parts of the book.

[Spatial Econometrics: Methods and Models](#)
L. Anselin, 2013-03-09

Spatial econometrics deals with spatial dependence and spatial heterogeneity, critical aspects of the data used by regional scientists. These characteristics may cause standard econometric techniques to become inappropriate. In this book, I combine several recent research results to construct a comprehensive approach to the incorporation of spatial effects in econometrics. My primary focus is to demonstrate how these spatial effects can be considered as special cases of general frameworks in standard econometrics and to outline how they necessitate a separate set of methods and techniques encompassed within the field of spatial econometrics. My viewpoint differs from that taken in the discussion of spatial autocorrelation in spatial statistics, e.g. most recently by Cliff and Ord (1981) and Upton and Fingleton (1985), in that I am mostly concerned with the relevance of spatial effects on model specification, estimation, and other inference in what I call a model driven approach, as opposed to a data driven approach in spatial statistics. I attempt to combine a rigorous econometric perspective with a comprehensive treatment of methodological issues in spatial analysis.
