

# PSYC 421: Psychological Testing

## Exam 1 Study Guide

### Psychological Testing AKA

- The field of study concerned with the theory and technique of educational and psychological measurement of knowledge, abilities, attitudes, and personality traits
  - It involves two major research tasks:
    - The construction of instruments and procedures for measurement.
    - The development and refinement of theoretical approaches to measurement

### Measurement

- In psychology, we are interested in describing the distributions of and/or relationships among abstract concepts such as:
  - Political conservatism
  - Intelligence
  - Neuroticism
  - Aggression
- However, in most cases these constructs are abstractions that often cannot be directly observed
- Note that the degree to which the operationalization of the abstract concept reflects or mirrors the construct is the degree to which the operationalization can be said to be **valid**
- The value of scientific research is completely dependent upon the degree to which the operationalizations are successful or valid

### Concepts and Constructs

- **Concept:**
  - An abstraction formed by generalization from particulars.
  - Abstracts are hard to define
  - e.g. intelligence
- **Construct:**
  - A concept with scientific purpose (i.e. operationalized)
  - Can be measured and studied.
  - e.g. IQ
