*Canyon and Cosmos* Don Lago,2025-05-06 Throughout history humans have sought creation stories to define our identity and affirm our connections with the universe diverse life forms and one another Over the last two centuries science has delivered a bold new creation story full of immense time and space extraordinary objects and powerful natural forces Science ideas can seem mere abstractions but at the Grand Canyon better than anywhere else on Earth our new creation story is manifested physically and powerfully A major work of literary nature writing Canyon and Cosmos takes readers on a journey through the Grand Canyon s deep time geological forces and biological evolution making them very real personal and meaningful Through decades of hiking and kayaking author Don Lago has gotten to know the canyon intimately Ranging through world mythologies and Native American spirituality he explores how humans have sought to understand the universe He confronts existential questions of whether humans can find enough meaning in the scientific cosmos Through poetic prose symbolism and philosophical insight he shows how existence itself is our deepest source of life and meaning

*Wasp* Richard Jones,2019-11-15 Our fear and fascination with wasps set them apart from other insects Despite their iconic form and distinctive colors they are surrounded by myth and misunderstanding Often portrayed in cartoon like stereotypes bordering on sad parody wasps have an unwelcome and undeserved reputation for aggressiveness bordering on vindictive spite This mistrust is deep seated in a human history that has awarded commercial and spiritual value to other insects such as bees but has failed to recognize any worth in wasps Leading entomologist Richard Jones redresses the balance in this enlightening and entertaining guide to the natural and cultural history of these powerful arthropod carnivores Jones delves into their complex nesting and colony behavior their fascinating caste system and their major role at the center of many food webs Drawing on up to date scientific concepts and featuring many striking color illustrations Jones pushes past the sting showing exactly why wasps are worthy of greater understanding and appreciation

*Regulatory Mechanisms in Insect Feeding* Reg F. Chapman,Gerrit de Boer,2012-12-06 The only book to deal comprehensively with insect feeding was published by C T Brues in 1946 His *Insect Dietary* was an account of insect feeding habits Since that time there has been a revolution in biology and almost all aspects of our understanding of insect feeding have expanded to an extent and into areas that would have been unthinkable in Brues day Yet our book does not replace *Insect Dietary* but instead complements it because our aim is to bring together information on the mechanisms by which food quality and quantity are regulated We deliberately focus attention on the feeding process to include food finding would have required a much larger book and would have moved the focus away from more proximate mechanisms This book is dedicated to the late Vincent G Dethier As a pioneer in studying the physiological basis of animal behavior he focused on regulation of feeding in flies and caterpillars His work on the blowfly together with that by his many students andco workers still provides the most completely described mechanism of insect feeding The citation of his work in almost every chapter in this book

illustrates the importance of his findings and ideas to our current understanding of regulation of insect feeding The authors in this book provide many innovative and stimulating ideas typifying Dethier's approach to the study of feeding behavior
