Variations in Tectonic Styles in Canada Geological Association of Canada,1972 **Kinematic Evolution and Structural Styles of Fold-and-thrust Belts** J. Poblet,Richard J. Lisle,2011 Fold and thrust belts occur worldwide have formed in all eras of geological time and are widely recognized as the most common mode in which the crust accommodates shortening Much current research on the structure of fold and thrust belts is focused on structural studies of regions or individual structures and on the geometry and evolution of these regions employing kinematic mechanical and experimental modelling In keeping with the main trends of current research this title is devoted to the kinematic evolution and structural styles of a number of fold and thrust belts formed from palaeozoic to recent times The papers included in this book cover a broad range of different topics from modelling approaches to predict internal deformation of single structures 3D reconstructions to decipher the structural evolution of groups of structures palaeomagnetic studies of portions of fold and thrust belts geometrical and kinematic aspects of Coulomb thrust wedges and structural analyses of fold and thrust belts to unravel their sequence of deformations Sedimentary Cover of the Craton in Canada D.F. Stott,J.D. Aitken,1993 The early chapters of the volume present data and interpretations of the geophysics of the craton and summarise with sequential maps the tectonic evolution of the craton The main body of the text and accompanying plates and figures present the stratigraphy structural history and economic geology of specific sedimentary basins and regions The volume concludes with a summary chapter in which the currently popular theories of cratonal tectonics are discussed and the unresolved questions are identified *Variation in Tectonic Styles in Canada* Raymond A. radioactive waste A study of the geological framework of three structural provinces Superior Southern and Grenville within Ontario has resulted in an inventory of 1365 plutons which are identified on Map 1533A at a scale of 1:1 000 000. The plutons have been classified by rock type: granite sensu lato comprises 75% of the plutons, gabbro 15%, alkalic rocks 8%, and anorthosite 2%.
