Studies Of Cellular Function Using Radiotracers:

Studies Of Cellular Functions Using Radiotracers (1982) Mervyn Billinghamurst, 2017-11-22 This volume is the result of the concerted effort of a number of scientists to summarize in a succinct way the current understanding of the mechanisms of these localizations The editors of the book gratefully acknowledge this combined effort

Receptor Binding Radiotracers (1982) William C. Eckelman, 2017-11-22 This series of books on Radiotracers in Biology and Medicine is on the one hand an unbelievably expansive enterprise and on the other hand a most noble one as well Tools to probe biology have developed at an accelerating rate Hevesy pioneered the application of radioisotopes to the study of chemical processes and since that time radioisotopic methodology has probably contributed as much as any other methodology to the analysis of the fine structure of biologic systems Radioisotopic methodologies represent powerful tools for the determination of virtually any process of biologic interest It should not be surprising therefore that any effort to encompass all aspects of radiotracer methodology is both desirable in the extreme and doomed to at least some degree of inherent failure The current series is assuredly a success relative to the breadth of topics which range from in depth treatise of fundamental science or abstract concepts to detailed and specific applications such as those medicine or even to the extreme of the methodology for sacrifice of animals as part of a radiotracer distribution study

Principles Of Radiopharmacology Lelio G. Colombetti, 2019-07-17 First Published in 1979 this book offers a full comprehensive guide to the applications and uses of radiopharmacology Carefully compiled and filled with a vast repertoire of notes diagrams and references this book serves as a useful reference for radiologists and other practitioners in their respective fields

Animal Models in Radiotracer Design Richard M. Lambrecht, William C. Eckelman, 2012-12-06 The editors have asked me to write this foreword probably for two reasons First I have spent 35 years trying to develop radiolabeled compounds that would help diagnose and treat disease I and the people from my laboratory have been much involved with developing Na I for the diagnosis and treatment of hyperthyroidism and well differentiated thyroid cancer Second I was a participant throughout the entire symposium upon which this book is based Our latest ¹³¹I labeled compound ¹³¹I metaiodobenzylguanidine took us 13 years to develop It has succeeded in diagnosing and treating adrenergic tumors 31 under circumstances where Na I would have failed for the diagnosis and treatment of thyroid cancer I therefore hope that more scientists will be attracted to this field This book is written by intelligent experienced investigators who are knowledgeable It is a must for anyone new in the field For the experienced I would like to remind you that I attended the entire symposium the breadth and timeliness of the update has helped us to redirect some of our current efforts into more scientifically productive channels
