The book highlights these countries' contribution to tackling climate change, emphasizing the green building benefits and the research behind them. The contributing authors explore how the green building revolution has spread to developing countries and how national governments have initiated their own green building policies and agendas. They also explore how the market has echoed the green building policy and how a business case for green buildings has been established. In turn, they show how an international set of green building standards in the form of various techniques and tools has been incorporated into local building and construction practices. In closing, they demonstrate how the developing world is emerging as a key player for addressing the energy and environmental problems currently facing the world. The book helps developers, designers, and policy makers in governments and green building stakeholders to make better decisions on the basis of global and local conditions. It is also of interest to engineers, designers, facility managers, and researchers as it provides a holistic picture of how the industry is responding to the worldwide call for greener and more sustainable buildings.
