Introduction to Functional Differential Equations Jack K. Hale, Sjoerd M. Verduyn Lunel, 2013-11-21 The present book builds upon an earlier work of J Hale *Theory of Functional Differential Equations* published in 1977 We have tried to maintain the spirit of that book and have retained approximately one third of the material intact One major change was a complete new presentation of linear systems Chapters 6-9 for retarded and neutral functional differential equations The theory of dissipative systems Chapter 4 and global attractors was completely revamped as well as the invariant manifold theory Chapter 10 near equilibrium points and periodic orbits A more complete theory of neutral equations is presented see Chapters 1-2, 3-9 and 10 Chapter 12 is completely new and contains a guide to active topics of research In the sections on supplementary remarks we have included many references to recent literature but of course not nearly all because the subject is so extensive Jack K Hale Sjoerd M Verduyn Lunel Contents Preface v Introduction 1-1 Linear differential difference equations 11-1-1 Differential and difference equations 11-1-2 Retarded differential difference equations 13-1-3 Exponential estimates of $x(t)$ 15-1-4 The characteristic equation 17-1-5 The fundamental solution 18-1-6 The variation of constants formula 23-1-7 Neutral differential difference equations 25-1-8 Supplementary remarks 34-2 Functional differential equations Basic theory 38-2-1 Definition of a retarded equation 38-2-2 Existence uniqueness and continuous dependence 39-2-3 Continuation of solutions 44

Oscillation Theory for Difference and Functional Differential Equations R.P. Agarwal, Said R. Grace, Donal O'Regan, 2013-06-29 This monograph is devoted to a rapidly developing area of research of the qualitative theory of difference and functional differential equations In fact in the last 25 years Oscillation Theory of difference and functional differential equations has attracted many researchers This has resulted in hundreds of research papers in every major mathematical journal and several books In the first chapter of this monograph we address oscillation of solutions to difference equations of various types Here we also offer several new fundamental concepts such as oscillation around a point oscillation around a sequence regular oscillation periodic oscillation point wise oscillation of several orthogonal polynomials global oscillation of sequences of real valued functions oscillation in ordered sets \mathbb{R} oscillate oscillation in linear spaces oscillation in Archimedean spaces and oscillation across a family These concepts are explained through examples and supported by interesting results In the second chapter we present recent results pertaining to the oscillation of n th order functional differential equations with deviating arguments and functional differential equations of neutral type We mainly deal with integral criteria for oscillation While several results of this chapter were originally formulated for more complicated and or more general differential equations we discuss here a simplified version to elucidate the main ideas of the oscillation theory of functional differential equations Further from a large number of theorems presented in this chapter we have selected the proofs of only those results which we thought would best

Functional Differential Equations Tarō Yoshizawa, 1991 Theory of Functional Differential Equations Jack K. Hale, 2012-12-06 Since the publication of my lecture notes Functional Differential Equations in the Applied Mathematical Sciences series many new developments have occurred As a consequence it was decided not to make a few corrections and additions for a second edition of those notes but to present a more comprehensive theory The present work attempts to consolidate those elements of the theory which have stabilized and also to include recent directions of research The following chapters were not discussed in my original notes Chapter 1 is an elementary presentation of linear differential difference equations with constant coefficients of retarded and neutral type Chapter 4 develops the recent theory of dissipative systems Chapter 9 is a new chapter on perturbed systems Chapter 11 is a new presentation incorporating recent results on the existence of periodic solutions of autonomous equations Chapter 12 is devoted entirely to neutral equations Chapter 13 gives an introduction to the global and generic theory There is also an appendix on the location of the zeros of characteristic polynomials The remainder of the material has been completely revised and updated with the most significant changes occurring in Chapter 3 on the properties of solutions Chapter 5 on stability and Chapter 10 on behavior near a periodic orbit
