Understanding Language Acquisition Christina E. Erneling, 1993-01-01 How is language acquisition possible How is it that humans within a few years of birth can speak and understand language transcending both its limited experience and biological limitations In this challenge to the narrow confines of psychology and philosophy Christina Erneling argues that language acquisition results

from the interaction between linguistic creativity inherent in language and a biological and social framework of learning Erneling explains and critically analyzes the idea that language acquisition requires a meaningful language of thought contrasting this with Wittgenstein's ideas on language and learning Erneling shows that the assumptions in J Fodor's development of Chomsky's ideas into a theory of language of thought have significantly influenced developmental theories yet fail to resolve the conflict between linguistic creativity and the necessity of a framework for learning She argues that the later Wittgenstein was more concerned with the conditions of learning than is generally appreciated and shows how his remarks can be developed into an alternative approach to language learning Understanding Language Acquisition has profound implications for evaluating hidden metatheoretical assumptions as well as for empirical research and methods for teaching language and treating language disorders
