Summary of Tom Standage's The Victorian Internet Everest

Media, 2022-05-19T22:59:00Z Please note This is a companion version not the original book Sample Book Insights 1 The telegraph a system of sending messages or information to a distant place was invented in 1746 It was a big deal because it suggested that it should be possible to harness electricity to build a signaling device that could send messages over great distances incomparably faster than a human messenger could carry them 2 In 1617 Famianus Strada a learned Italian wrote a book explaining how two needles could be touched with a lodestone and then balanced on separate pivots and the one turned in a particular direction would cause the other to sympathetically move parallel to it 3 The story of the magic needles was based on a germ of truth there are naturally occurring minerals called lodestones that can be used to magnetize needles and other metallic objects However these did not exist in the form described by Strada 4 Chappe s telegraph was a series of wooden panels that could be flipped from black to white as the second hand passed over a particular number The messages

were sent over very great distances very quickly and a telescope was used to observe the panels Simply Electrifying

Pop! Daniel Gross, 2009-10-13 Bubbles from hot stocks in the 1920s to hot stocks in the 1990s are much lamented features of contemporary economic life Time and again American investors seduced by the lures of quick money new technologies and excessive optimism have shown a tendency to get carried away Time and again they have appeared foolish when the bubble burst The history of finance is filled with tragic tales of shattered dreams bankruptcies and bitter recriminations But what if the I told you so lectures about bubbles tell only half the story What if bubbles accomplish something that can only be seen in retrospect What if the frenzy of irrational economic enthusiasm lays the groundwork for sober minded opportunities growth and innovation Could it be that bubbles wind up being a competitive advantage for the bubble prone U S economy In this entertaining and fast paced book you ll laugh as much as you cry Daniel Gross convincingly argues that every bubble has a golden lining From the 19th century mania for the telegraph to the current craze in alternative energy from railroads to real estate Gross takes us on a whirlwind tour of reckless investors and pie in the sky promoters detailing the mania they created but also the lasting good they left behind In one of the great ironies of history Gross shows how the bubbles once generally seen as disastrous have actually helped build the commercial infrastructures that have jump started American growth If there is a secret to the perennial resilience and exuberance of the American economy Gross may just have found it in our peculiar capacity to blow financial bubbles and successfully clean up the mess

Conservation in the Internet Age James N. Levitt, 2002-09 Since the earliest days of our nation new communications and transportation networks have enabled vast changes in how and where Americans live and work Transcontinental railroads and telegraphs helped to open the West mass media and interstate highways paved the way for suburban migration In our own day the internet and advanced logistics networks are enabling new changes on the landscape with both positive and negative impacts on our efforts to conserve land and biodiversity Emerging technologies have led to tremendous innovations in conservation science and resource management as well as education and advocacy efforts At the same time new networks have been powerful enablers of decentralization facilitating sprawling development into previously undesirable or inaccessible areas Conservation in the Internet Age offers an innovative cross disciplinary perspective on critical changes on

the land and in the field of conservation The book provides a general overview of the impact of new technologies and networks explores the potentially disruptive impacts of the new networks on open space and biodiversity presents case studies of innovative ways that conservation organizations are using the new networks to pursue their missions considers how rapid change in the Internet Age offers the potential for landmark conservation initiatives Conservation in the Internet Age is the first book to examine the links among land use technology and conservation from multiple perspectives and to suggest areas and initiatives that merit further investigation It offers unique and valuable insight into the challenges facing the land and biodiversity conservation community in the early twenty first century and represents an important new work for policymakers conservation professionals and academics in planning design conservation and resource management policy and related fields

Internet Trust and Security James Essinger,2001 This book is an essential guide to solving the only problems likely to prevent businesses from making the most of what the Internet can offer them The problems are security and authentication problems this book provides the solutions
