one boy and his family *Woolly Mammoths* Charles River Charles River Editors,2019-12-20 Includes pictures Includes a bibliography for further reading It was a frosty wintry September morning in 2012 when 11 year old Yevgeny Zhenya Salinder donned his warmest quilted jacket a knitted woolen cap and matching mittens and headed out the door with his faithful tail wagging dogs in tow Like most mornings the kid ambled about near the Sopkarga polar weather station an isolated region in the northern Russian Taymyr Peninsula where he resided but this particular morning his pace was slowed by a foul almost eye watering stench Intrigued Salinder and the dogs sniffed out the source of the strange miasma and in the process they stumbled upon a defrosted pair of heels from an unknown creature protruding from the cold earth When young Salinder relayed what he had found to his parents they alerted the authorities but initially nobody had the slightest notion how profound the discovery was The heels as it turned out were attached to the carcass of a 16 year old woolly mammoth that perished some 30 000 years ago almost completely intact The mammoth initially nicknamed Zhenya after its discoverer was said to be the most significant discovery of a mammoth since 1901 and it is the second best preserved of its kind that has ever been uncovered Not only was its skeleton in near pristine condition it also bore one of its tusks a mass of skin fat meat an eye an ear and many of its organs It was this stunning find that allowed scientists to confirm the purpose of the humps found on the backs of these creatures which were extra compartments of insulatory fat By the time Zhenya made the discovery people had been quite familiar with the extinct giants for many years and people across the world have seen models and depictions of them to go along with the fossils Since Georges Cuvier recognized the specimens as an extinct elephant species near the end of the 18th century various finds of mammoth fossils particularly in places where they were well preserved in the cold have made the woolly mammoth perhaps the most popular extinct animal outside of the dinosaurs Standing around 10 feet tall and weighing several tons woolly mammoths seem like the stuff of legend but ancient cave art indicated that unlike dinosaurs woolly mammoths were contemporaries of early humans with the last ones going extinct only about 4 000 years ago All of that explains why people have long been fascinated by woolly mammoths and have even envisioned bringing them back to life via genetics sometime in the future *Woolly Mammoths The History and Legacy of the Most Famous Extinct Elephant Species* looks at the origins of the animals and analyzes the fossil finds Along with pictures depicting important people places and events you will learn about the woolly mammoths like never before *Woolly Mammoth in Trouble* Dawn Bentley,Karen Carr,2004 When Woolly Mammoth searches for food during a snowstorm he becomes separated from his herd Includes brief notes on the woolly mammoth
