Types In Logic Programming:

Types in Logic Programming Frank Pfenning,1992 This collection of original research papers assesses and summarizes the impact of types on logic programming Type theory is a well established branch of theoretical computer science that has played an important role in the development of imperative and functional programming languages This collection of original research papers assesses and summarizes the impact of types on logic programming It covers all of the major themes in this burgeoning field including simple types regular tree types polymorphic types subtypes and dependent types Language design issues as well as semantics pragmatics and applications of types are discussed The benefits that type considerations have to offer logic programming are being increasingly realized through type checking many errors can be caught before a program is run resulting in more reliable programs types form an expressive basis for module systems since they prescribe a machine verifiable interface for the code encapsulated within a module and types may be used to improve performance of code generated by a compiler The research in this collection describes these benefits as well as important differences in the impact of types in functional and logic programming

Hill, David S. Warren, 2009-07-24 This book constitutes the refereed proceedings of the 25th International Conference on Logic Programming ICLP 2009 held in Pasadena CA USA in July 2009 The 29 revised full papers together with 9 short papers 4 invited talks 4 invited tutorials and the abstracts of 18 doctoral consortium articles were carefully reviewed and selected from 69 initial submissions The papers cover all issues of current research in logic programming namely semantic foundations formalisms nonmonotonic reasoning knowledge representation compilation memory management virtual machines parallelism program analysis program transformation validation and verification debugging profiling concurrency objects coordination mobility higher order types modes programming techniques abductive logic programming answer set programming constraint logic programming inductive logic programming alternative inference engines and mechanisms deductive databases data integration software engineering natural language web tools internet agents artificial intelligence bioinformatics *Symposium on Logic Programming*, 1987 **Logic Programming** Christoph Beierle, Lutz Plümer, 1995 This text aims at promoting a convergence between the technical challenges of developing advanced software systems and the formal techniques tools and features evolving from the logic programming paradigm It provides contributions towards different aspects of logic programming *Logic Programming* I. Balbin, K. Lecot, 2012-12-06 Logic Programming was effectively defined as a discipline in the early seventies It is only during the early to mid eighties that books conferences and journals devoted entirely to Logic Programming began to appear Consequently much of the work done during this first crucial decade in Marseilles Edinburgh London Budapest and Stockholm to name a few is often overlooked or difficult to trace There are now two main regular conferences on Logic Programming and at least five journals The Journal of Logic Programming New Generation Computing Automated Reasoning The Journal of Symbolic Computation and Future Generation Computer Systems Logic Programming however has its roots in Automated Theorem Proving and via the expanding area of expert systems strongly influences researchers in such varied fields as Civil Engineering Chemistry Law etc Consequently many papers related to Logic Programming appear in a wide variety of journals and proceedings of conferences in other disciplines This is particularly true of Computer Science where a revolution is taking place in hardware design programming languages and more recently databases One cannot overestimate the importance of such a bibliography **Functional and**

Logic Programming, 2006 Logic Programming Andrei Voronkov, 1992 This volume contains the proceedings of two Russian conferences on logic programming held in 1990 in Irkutsk and in 1991 in St Petersburg The aim of the conferences was to bring together researchers from the Russian and the international logic programming communities Topics covered in the volume include logic programming automated theorem proving non monotonic reasoning applications of mathematical logic to computer science deductivedatabases implementation of declarative concepts and programming in non classical logics This is the first volume to represent activity in the field of logic programming in the countries of the former Soviet Union PUBLISHER S WEBSITE *Logic Programming* Yves Deville, 1990 **Natural Language Understanding and Logic Programming, III** Charles Grant Brown, Gregers Koch, 1991 Addressed in this third workshop on natural language understanding and logic programming are a wide variety of issues and some interesting challenges for future work For temporal expressions the intriguing question is examined Can we in fact provide the translation from the HOL system logic to NL and vice versa Can we now develop NL systems that take advantage of this logic and particularly can we extend the system to deal with duration Also a strong formal linguistic base for natural language understanding programs is presented as well as other topics including temporal persistence natural semantics and logic and alternative parses
