**Logic, Artificial Intelligence, and Robotics** Jair Minoro Abe,João Inácio da Silva Filho,2001      **Knowledge Representation and the Semantics of Natural Language** Hermann Helbig,2005-12-19 Natural Language is not only the most important means of communication between human beings it is also used over historical periods for the preservation of cultural achievements and their transmission from one generation to the other During the last few decades the flood of digitalized information has been growing tremendously This tendency will continue with the globalization of information societies and with the growing importance of national and international computer networks This is

one reason why the theoretical understanding and the automated treatment of communication processes based on natural language have such a decisive social and economic impact. In this context the semantic representation of knowledge originally formulated in natural language plays a central part because it connects all components of natural language processing systems: be they the automatic understanding of natural language, analysis, the rational reasoning over knowledge bases or the generation of natural language expressions from formal representations. This book presents a method for the semantic representation of natural language expressions, texts, sentences, phrases, etc. which can be used as a universal knowledge representation paradigm in the human sciences like linguistics, cognitive psychology or philosophy of language as well as in computational linguistics and in artificial intelligence. It is also an attempt to close the gap between these disciplines which to a large extent are still working separately.

**Industrial and Engineering Applications of Artificial Intelligence and Expert Systems** Takushi Tanaka, Setsuo Ohsuga, Ali Moonis, 2022-04-19 This volume includes the proceedings from Proceedings of the Ninth International Conference Fukuoka Japan June 4-7 1996. This work represents a broad spectrum of new ideas in the field of applied artificial intelligence and expert systems and serves to disseminate information regarding intelligent methodologies and their implementation in solving various problems in industry and engineering.

**Artificial Intelligence, Expert Systems, and Symbolic Computing** Elias N. Houstis, John Rischard Rice, 1992 This volume contains papers in the areas of artificial intelligence, expert systems, symbolic computing and applications to scientific computing. Together they provide an excellent overview of the dynamic state of these closely related fields. They reveal a future where scientific computation will increasingly involve symbolic and artificial intelligence tools as these software systems become more sophisticated, also a future where systems of computational science and engineering will be problem solving environments created with components from numerical analysis, computational geometry, symbolic computing and artificial intelligence.

Artificial Intelligence in Design, 1992

**Intelligent Assistant Systems** Guy A. Boy, 1991 The first six chapters of this book concern classical artificial intelligence covering knowledge representation, search and problem solving techniques; the last six addresses nonmonotonic reasoning, the distinction between situational and analytical knowledge, the distribution of intelligence between human and machine, the operator interface and the problem of knowledge acquisition.
