**Integrated Network Management VIII** Germán Goldszmidt,Schönwälder Jürgen,2013-06-05 Welcome to 1M 2003 the eighth in a series of the premier international technical conference in this field As IT management has become mission critical to the economies of the developed world our technical program has grown in relevance strength and quality Over the next few years leading IT organizations will gradually move from identifying

infrastructure problems to providing business services via automated intelligent management systems To be successful these future management systems must provide global scalability for instance to support Grid computing and large numbers of pervasive devices In Grid environments organizations can pool desktops and servers dynamically creating a virtual environment with huge processing power and new management challenges As the number type and criticality of devices connected to the Internet grows new innovative solutions are required to address this unprecedented scale and management complexity The growing penetration of technologies such as WLANs introduces new management challenges particularly for performance and security Management systems must also support the management of business processes and their supporting technology infrastructure as integrated entities They will need to significantly reduce the amount of adventitious bootless data thrown at consoles delivering instead a cogent view of the system state while leaving the handling of lower level events to self managed multifarious systems and devices There is a new emphasis on autonomic computing building systems that can perform routine tasks without administrator intervention and take prescient actions to rapidly recover from potential software or hardware failures

Design of Computing Systems Michael James Smith, Gavriel Salvendy, Richard J. Koubek, 1997 Hardbound A total of 2 183 individuals from industry academia research institutes and governmental agencies from 43 countries submitted their work for presentation at the 7th International Conference on Human Computer Interaction held in San Francisco in August 1997 Only those submittals which were judged to be of high scientific quality were included in the program These two volumes contain papers addressing the latest research and application in the human aspects of design and use of computing systems Features of these volumes Papers thoroughly cover the entire field of human computer interaction including the cognitive social ergonomic and health aspects of work with computers Major advances in knowledge and effective use of computers are addressed in a variety of diversified application areas including offices financial institutions manufacturing electronic publishing construction and health care
