Leakey, Roger Lewin, 1995 Richard Leakey One Of The World's Foremost Experts On Man's Evolutionary Past Now Turns His Eye To The Future And Doesn't Like What He Sees To the philosophical the earth is eternal while the human race presumptive keeper of the world's history is a mere speck in the rich stream of life It is known that nothing upon Earth is forever geography climate and plant and animal life are all subject to radical change On five occasions in the past catastrophic natural events have caused mass extinctions on Earth But today humans stand alone in dubious distinction among Earth's species Homo Sapiens possesses the ability to destroy entire species at will to trigger the sixth extinction in the history of life In **The Sixth Extinction** Richard Leakey and Roger Lewin consider how the grand sprawl of human life is inexorably wreaking havoc around the world The authors of *Origins* and *Origins Reconsidered* unimpeachable authorities on the human fossil record turn their attention to the most uncharted anthropological territory of all the future and man's role in defining it According to Leakey and Lewin man and his surrounding species are end products of history and chance Now however humans have the unique opportunity to recognize their influence on the global ecosystem and consciously steer the outcome in order to avoid triggering an unimaginable upheaval **Climate Change Temporalities** Kyrre Kverndokk, Marit Ruge Bjærke, Anne Eriksen, 2021-03-22 *Climate Change Temporalities* explores how various timescales timespans intervals rhythms cycles and changes in acceleration are at play in climate change discourses It argues that nuanced detailed and specific understandings and concepts are required to handle the challenges of a climatically changed world politically and socially as well as scientifically Rather than reflecting abstractly on theories of temporality this edited collection explores a variety of timescales and temporalities from narratives experience popular culture and everyday life in addition to science and history and the entanglements between them The chapters are clustered into three main sections exploring a range of genres such as questionnaires interviews magazines news media television series aquariums and popular science books to critically examine how and where climate change understandings are formed The book also includes chapters historicising notions of climate and temporality by exploring scientific debates and practices *Climate Change Temporalities* will be of great interest to students and scholars of humanistic climate change research environmental humanities studies of temporality and historicity cultural studies cultural history and popular culture **Guide to Elizabeth Kolbert's the Sixth Extinction** Elizabeth Kolbert, Eureka, 2017-03-31 PLEASE NOTE THIS IS A GUIDE TO THE ORIGINAL BOOK *Guide to Elizabeth Kolbert's The Sixth Extinction* Preview *The Sixth Extinction* is a book by award winning journalist Elizabeth Kolbert In this book the author demonstrates that species are dying out at a rate comparable to the previous mass extinctions and if the trend of global warming deforestation and pollution continues in its present course the numbers of extinct species will

meet or exceed that rate of destruction This event will include the extinction of humanity What this means is that the current loss of life today will soon justify the term The Sixth Extinction a mass extinction like the one that destroyed the dinosaurs 65 million years ago Inside this companion Overview of the book Important People Key Insights Analysis of Key Insights **The Sixth Extinction** Elizabeth Kolbert, Save Time Summaries, 2014-03-11 WARNING This is not the actual book The Sixth Extinction by Elizabeth Kolbert Do not buy this Summary Review Analysis if you are looking for a full copy of this great book This summary of The Sixth Extinction drills deep down into the book which travels to exotic locations around the world to illustrate case studies of an endangered planet think of it as a 1000 places to see before the world dies In chapter synopses speculate on different scenarios that could lead to an earth altering cataclysm Visit a frozen zoo where the cells of a 1 000 species have been served a liquid nitrogen cocktail Find hope as you learn how the most important ecological experiment ever done is currently underway in the Amazon rainforest In addition to an author biography this summary of The Sixth Extinction includes a putting it together section a helping hand for understanding Kolbert s big ideas It s hard to believe that the sum total of all human civilization will one day be compressed into a rock layer the width of a piece of paper but in The Sixth Extinction Elizabeth Kolbert gives the reader an expansive overview of how Mother Earth is getting ready to clean house again This time it s not just the mastodon bones being thrown out with the trash An exploration of how humans are heading for mass extinction largely due to their own follies The Sixth Extinction compresses anecdotes evidence and scientific characters into a sometimes humorous tome of an otherwise serious topic Humans Versus Nature Daniel R. Headrick, 2020 Since the appearance of Homo sapiens on the planet hundreds of thousands of years ago human beings have sought to exploit their environments extracting as many resources as their technological ingenuity has allowed As technologies have advanced in recent centuries that impulse has remained largely unchecked exponentially accelerating the human impact on the environment Humans versus Nature tells a history of the global environment from the Stone Age to the present emphasizing the adversarial relationship between the human and natural worlds Nature is cast as an active protagonist rather than a mere backdrop or victim of human malfeasance Daniel R Headrick shows how environmental changes epidemics climate shocks and volcanic eruptions have molded human societies and cultures sometimes overwhelming them At the same time he traces the history of anthropogenic changes in the environment species extinctions global warming deforestation and resource depletion back to the age of hunters and gatherers and the first farmers and herders He shows how human interventions such as irrigation systems over fishing and the Industrial Revolution have in turn harmed the very societies that initiated them Throughout Headrick examines how human driven environmental changes are interwoven with larger global systems dramatically reshaping the complex relationship between people and the natural world In doing so he roots the current environmental crisis in the deep past **The Sixth Extinction** Terry Glavin, 2007-04-03 A survey of the social extinctions taking place in the modern world draws on a variety of scientific disciplines to reveal how

advances in globalization are contributing to the losses of languages as well as diverse cultural ways of living seeing and understanding
