Space And Time:

Space, Time, and Spacetime Lawrence Sklar, 1977-03-15 In this book Lawrence Sklar demonstrates the interdependence of science and philosophy by examining a number of crucial problems on the nature of space and time problems that require for their resolution the resources of philosophy and of physics The overall issues explored are our knowledge of the geometry of the world the existence of spacetime as an entity over and above the material objects of the world the relation between temporal order and causal order and the problem of the direction of time Without neglecting the most subtle philosophical points or the most advanced contributions of contemporary physics the author has taken pains to make his explorations intelligible to the reader with no advanced training in physics mathematics or philosophy The arguments are set forth step by step beginning from first principles and the philosophical discussions are supplemented in detail by nontechnical expositions of crucial features of physical theories

Space, Time, and Stuff Frank Arntzenius, 2012-01-19 Frank Arntzenius presents a series of radical new ideas about the structure of space and time Space Time and Stuff is an attempt to show that physics is geometry that the fundamental structure of the physical world is purely geometrical structure Along the way he examines some non standard views about the structure of spacetime and its inhabitants including the idea that space and time are pointless the idea that quantum mechanics is a completely local theory the idea that antiparticles are just particles travelling back in time and the idea that time has no structure whatsoever The main thrust of the book however is that there are good reasons to believe that spaces other than spacetime exist and that it is the existence of these additional spaces that allows one to reduce all of physics to geometry Philosophy and metaphysics in particular plays an important role here the assumption that the fundamental laws of physics are simple in terms of the fundamental physical properties and relations is pivotal Without this assumption one gets nowhere That is to say when trying to extract the fundamental structure of the world from theories of physics one ignores philosophy at one s peril

The Science of Space-time Derek J. Raine, Michał Heller, 1981 Understanding Space, Time and Causality B.V. Sreekantan, Sisir Roy, 2019-12-06 This book examines issues related to the concepts of space time and causality in the context of modern physics and ancient Indian traditions It looks at the similarity and convergence of these concepts of modern physics with those discussed in ancient Indian wisdom The volume brings the methodologies of empiricism and introspection together to highlight the synergy between these two strands It discusses wide ranging themes including the quantum vacuum as ultimate reality quantum entanglement and metaphysics of relations identity and individuality and dark energy and anti matter as discussed in physics and in Indian philosophical schools like Vedanta Yoga Buddhist Kashmiri Shaivism and Jaina Philosophy First of its kind this book will be an essential read for scholars and researches of philosophy Indian philosophy philosophy of science theoretical physics and social science

General Relativity and Quantum Field Theory The glaring theoretical problem for 21st century physics is how to unite the two great theories of 20th century physics I have done just this by considering the problem from a fresh new perspective The result is a theory that is mathematically simple and elegant Based on one postulate I am able to derive a very simple mathematical formulation Using this formulation I find results for the Schwarzschild radius of a black hole the bounce of a neutron in Earth's gravity and the entropy of a black hole I also have discovered that space time is in fact a conserved quantity **The Rice Institute Pamphlet** ,1915 **The Ways of Knowing** William Pepperell Montague, 1925 *Space, Time and Einstein* J. B. Kennedy, 2003

This work covers the philosophical heart of the issues of space and time It introduces the revolutionary ideas of Einstein along with the concepts and arguments of philosophers both ancient and modern which have proved of lasting value The text serves to introduce the subject for beginning students as well as provide a clear statement of the state of the debate for a popular science readership Topics include Einstein's special and general relativity how to build an atom bomb the four dimensional universe the possibility of time travel the impossibility of motion whether space curves the big bang black holes as well as an inflationary and accelerating universe *The Teachers' Aid* ,1890

The Wave Equation on a Curved Space-Time F. G.
