who should make their theories fit the philosophers conceptions of these fundamental units The theory of relativity consists of two parts the old special theory and the more recent general theory The main philosophic achievement of the special theory of relativity is probably the recognition that the description of an event which is admittedly only perfect if both the space and time co ordinates are specified will vary according to the relative motion of the observer that it is impossible to say for instance whether the interval separating two events is so many centimetres and so many seconds but that this interval may be split up into length and time in different ways which depend upon the observer who is describing it The reasons which force this conclusion upon the physicist may be made clear by considering what will be the impression of two observers passing one another who send out a flash of light at the moment at which they are close together The light spreads out in a spherical shell and it might seem obvious since the observers are moving relatively to one another that they cannot both remain at the centre of this shell About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

Relativity and Modern Physics George David Birkhoff,Rudolph Ernest

Langer,1923 **Rebuilding Modern Physics** Enrique Morales-Riveira,2009-11-03 Because the theories of Special and General Relativity and the standard model for the physics of subatomic particles seem extremely intricate artificial irrational and contradictory and irreconcilable between themselves I consider it a moral obligation and an act of loyalty with regard to physics and towards myself to submit this work for the consideration and analysis by physicists and lay persons as a seminal contribution to the advancement of physics in general this work being an epistemological dissertation based on a pragmatic discovery helping process of reasoning and deduction rather than a technical discussion with the mathematical detail and precision usually set forth in the presentation of modern physics The logical answers found for all the theoretical questions and doubts I raised for myself concerning those two important areas of modern physics are those I explain in this work to share them with my dear readers being sure that its conceptual presentation will open up for them as with me new paths to arrive at an integral knowledge and understanding of physics my main motivation and purpose being to have physics again placed under the aegis of logic common sense and conceptual rigor in accordance with clear philosophical and epistemological basic rules trying to avoid the ad hoc building of geometrical and mathematical nirvanas in order to explain that which can be explained rationally and with simple words Enrique Morales Riveira October 2009 With solid scientific research Rebuilding Modern Physics offers a new approach to physics one which will clarify the dark mysterious intricate and confusing areas of modern physics Under the steady hand of Enrique Morales Riveira physics again becomes the realm of reason logic and reality In this epistemological discourse Morales Riveira shows how Minkowski s space time the theories of Special and General Relativity the standard model for the physics of fundamental particles and the current cosmological theories are based on irrational ideas and misleading experiments This has caused modern physics to fatally become a kind of unrealistic science where common sense and physical reality do not have any place whatsoever This is leading modern physics to an ominous dead end street and preventing its climb to the next platform His discussions include Why it is imperative to urgently abandon the arbitrary and unnatural conception of Minkowski s space time in modern physics How natural space time gives back to physics a lost symmetry inner interdependence unification coherence rationality and simplicity Reinterpretation of Newton s Theory of Universal Gravitation Though controversial Rebuilding Modern Physics marks an inflexion point in the science of physics for future generations of physicists avid to unveil the truths behind time space energy and matter **Space-Time, Relativity, and Cosmology** Jose Wudka,2006-07-20 Space Time Relativity and Cosmology provides a historical introduction to modern relativistic cosmology and traces its historical roots and evolution from antiquity to Einstein The topics are presented in a non mathematical manner with the emphasis on the ideas that underlie each theory rather than their detailed quantitative consequences A significant part of the book focuses on the Special and General theories of relativity The tests and experimental evidence supporting the theories are explained together with their predictions and their confirmation Other topics include a discussion of modern relativistic cosmology the

consequences of Hubble's observations leading to the Big Bang hypothesis and an overview of the most exciting research topics in relativistic cosmology This textbook is intended for introductory undergraduate courses on the foundations of modern physics It is also accessible to advanced high school students as well as non science majors who are concerned with science issues
