Sentinels of the Sun Barbara B. Poppe, Kristen P. Jordan, 2006 *Sentinels of the Sun* Forecasting Space Weather This book takes an in depth look at how space weather affects us Authors Barbara Poppe with Kristen Jordan **The Sun and Space Weather** Arnold Hanslmeier, 2002-06-30 Since the Sun is the main source of space weather effects the first part of the book is devoted to a general introduction to the physics of the Sun A better understanding of the phenomena underlying solar activity is also important for prediction of solar outbursts and thus for establishing alert systems for space missions and telecommunication systems The book contains the following topics possible influence of the Sun on the Earth s climate the effects of radiation on humans in space and the expected radiation dose from various solar events disturbances of the Earth s ionosphere and the implications of radio communication at different wavelength ranges possible hazardous asteroids and meteoroids and their detection and space debris and special shielding of spacecraft In the cited literature more detailed information about the topics may be found This book provides an introduction and overview of modern solar terrestrial physics for students as well as for researchers in the field of astrophysics solar physics geophysics and climate research

by severe space weather As a first step toward determining the socioeconomic impacts of extreme space weather events and addressing the questions of space weather risk assessment and management a public workshop was held in May 2008 The workshop brought together representatives of industry the government and academia to consider both direct and collateral effects of severe space weather events the current state of the space weather services infrastructure in the United States the needs of users of space weather data and services and the ramifications of future technological developments for contemporary society s vulnerability to space weather The workshop concluded with a discussion of un or underexplored topics that would yield the greatest benefits in space weather risk management

Scientific advice and evidence in emergencies Great Britain: Parliament: House of Commons: Science and Technology Committee, Andrew Miller, 2011-03-02 In this report the Science and Technology Committee examines how scientific advice and evidence is used in national emergencies when the Government and scientific advisory system are put under great pressure to deal with atypical situations The inquiry focused on four case studies i the 2009 10 H1N1 influenza pandemic swine flu ii the April 2010 volcanic ash disruption iii space weather and iv cyber attacks While science is used effectively to aid responses to emergencies the detachment of the Government Chief Scientific Adviser GCSA from the National Risk Assessment NRA the key process of risk evaluation carried out by the Cabinet Office is a serious concern The Committee recommends that the NRA should not be signed off until the GCSA is satisfied that all risks requiring scientific input and judgements have been properly considered A new independent scientific advisory committee should be set up to advise the Cabinet on risk assessment and review the NRA The Icelandic volcanic eruption in April 2010 is a stark example of the lack of scientific input

in risk assessment the risk of disruption to aviation caused by a natural disaster was dropped from the assessment process in 2009 despite warnings from earth scientists There are concerns over how risk was communicated to the public during the 2009 10 swine flu pandemic are raised in the report with sensationalised media reporting about the projected deaths from swine flu The Scientific Advisory Groups in Emergencies set up to advise government during emergencies were found to work in an unnecessarily secretive way [Congressional Record](#) United States. National Space Weather Program Implementation Plan (Color) Committee for Committee for Space Weather,2015-01-06 In the six years since the inception of the National Space Weather Program NSWP space weather has virtually become a household word Space weather refers to conditions on the Sun and in the solar wind magnetosphere ionosphere and thermosphere that can influence the performance and reliability of space borne and ground based technological systems and can endanger human life or health The growing awareness within the general public is largely the result of a conscious effort by all space weather stakeholders to educate the nation on the effects of solar storms and their potential impacts on the modern technology so important to daily life In addition to increased

awareness solid advances have been made in our knowledge of the space weather system and in our ability to forecast potentially disruptive space weather events The NSWP Strategic Plan released in 1995 put forth a strategy for achieving space weather goals The program elements outlined in this strategy are shown in the figure below The Strategic Plan was followed in 1997 by the NSWP Implementation Plan which identified specific objectives and recommended activities necessary for improving space weather predictive capabilities In the last six years significant progress has been made in all programmatic areas
