The Shape of Space Graham Nerlich, 1994-08-04 This is a revised and updated edition of Graham Nerlich's classic book 1976 It develops a metaphysical account of space that treats it as a real and concrete entity showing that shape plays a key explanatory role in space and spacetime theories Arguing that geometrical explanation is very like causal explanation Professor Nerlich prepares the ground for philosophical argument and investigates how different spaces would affect perception differently Along the way Professor Nerlich criticizes and rejects conventionalism as a non realist metaphysics of space concluding that there is in fact no problem of underdetermination for this aspect of spacetime theories while offering an extensive discussion of the relativity of motion

Describing the Dynamics of "Free" Material Components in Higher-Dimensions Dr. Martin Concoyle, 2014 The issue which the new ideas of these new books really raise with our culture is not about whether they are true since these new ideas identify a valid context for physical description and whereas the current context for math and physics 2014 cannot do that ie they cannot describe the stable properties of a general many but few body system Whereas the new ideas about math and physics can be used to solve the most fundamental problems about the physical world in regard to understanding physical stability a problem which the current descriptive context of math and physics 2014 cannot solve That is what now in 2014 passes for math and physics knowledge are delusions Yet these delusions are the ideas expressed in our propaganda education system about math and physics Rather The real issue which these new ideas present to our culture is about our cultural relation to what is beyond the material world That is it is about our cultural representation of religion or the spirit In particular in relation to the previous knowledge humans needed to possess in order to make Gobekli tepe Puma Punku Stonehenge etc ie simply to be able to lift and position such large stones as well as the understanding which is needed to go beyond the context of the material world and into the context of all the ancient mythologies in regard to the ancient religious stories etc etc The current paradigm in 2014 describes a general state of indefinable randomness in which there is always a chaotic transitioning process which exists as random elementary particle collisions and which supposedly is perpetually occurring Thus their description of the wide range of the generally stable states of the many but few body systems into which this forever chaotically transitioning process supposedly settles but explicit descriptions of this process do not exist Instead their answer is that such stable many but few body systems are too complicated to describe
