Using Your Brain For A Change:

Using Your Brain--for a Change Richard Bandler, 1985 Bandler covers a lot of ground in this book in his unique style and provides real insight into areas such as sub modalities and multiple perspectives in a fairly short period 157 pages The content is edited notes from a series of Bandler workshops in a similar vein to Frogs into Princes and Trance Formations The book begins with an overview of NLP making particular reference to the new submodality patterns the book was written in 1985 and presenting these as a faster and more powerful way of creating personal change Subsequent chapters provide a humorous exploration of many of the traditional approaches to personal change and outline many useful guiding principles structure versus content etc for the application of NLP to personal change The author makes repeated reference to a number of epistemological issues underlying traditional psychological approaches that tend to focus on what s wrong when you broke what broke you and why you broke He goes on to state that psychologists have never been interested in how you broke or how you continue to maintain the state of being broken NLP on the other hand Bandler asserts assumes people work perfectly and that people are just doing something different from what we or they want to have happen This provides a clear indication of the approach adopted in the remainder of the book and suggests that the focus of NLP on subjective experience as the study of subjective experience is entirely valid and necessary Bandler provides a convincing argument for tailoring all our change work to the individual purely because each individual is unique The book continues with a useful and insightful exploration of a number of techniques including the fast phobia cure contrastive analysis in belief change integrated anchors and Swish as well as discussion of more general and generative strategies for learning and motivation

How to Use Your Mind; a Psychology of Study Harry Dexter Kitson,1921 [How to Use Your Mind](#) Harry Dexter Kitson,1916 Educational leaders are seeing with increasing clearness the necessity of teaching students not only the subject matter of study but also methods of study Teachers are beginning to see that students waste a vast amount of time and form many harmful habits because they do not know how to use their minds The recognition of this condition is taking the form of the movement toward supervised study which attempts to acquaint the student with principles of economy and directness in using his mind It is generally agreed that there are certain tricks which make for mental efficiency consisting of methods of apperceiving facts methods of review devices for arranging work Some are the fruits of psychological experimentation others are derived from experience Many of them can be imparted by instruction and it is for the purpose of systematizing these and making them available for students that this book is prepared The evils of unintelligent and unsupervised study are evident to all who have any connection with modern education They pervade the entire educational structure from kindergarten through college In college they are especially apparent in the case of freshmen who in addition to the numerous difficulties incident to entrance into the college world suffer peculiarly because they do not know how to attack the difficult subjects of the curriculum In recognition of these conditions special attention is given at The University of Chicago toward supervision of study All freshmen in the School of Commerce and Administration of the University are given a course in Methods of Study in which practical discussions and demonstrations are given regarding the ways of studying the freshman subjects In addition to the group work cases presenting special features are given individual attention for it must be admitted that while certain difficulties are common to all students there are individual cases that present peculiar phases and these can be served only by personal consultations These personal consultations are expensive both in time and patience for it frequently happens that the mental habits of a student must be thoroughly reconstructed and this requires much time and attention but the results well repay the effort A valuable accessory to such individual supervision over students has been found in the use of psychological tests which have been described by the author in a monograph entitled The Scientific Study of the College Student
