

BIOLOGY LAB REPORT WRITING

TITLE

- Must be appropriate, clear, informative and specific
- Construct a title that will demonstrate that you understood the point of the study
- Consider your key words to guide your title

INTRODUCTION

- This section tells why the study was undertaken it establishes the framework for the entire report
- Should have an openings statement and there should be flow of thoughts (coherence) in your write up
- Define specialized terminology but your write up should not be a series of definitions
- Briefly explain any specialized technique to be carried out or how a specialized equipment works
- The background information must be related to the investigation
- Support all statements of fact and opinion with evidence i.e. cite literature; but not websites, primary sources only
- Never set out to prove, verify or demonstrate the truth of something. Rather set out to test, document or describe.
- Your introduction must lead to an aim/ objective/ research question /hypothesis/ prediction
- Your introduction should be brief and well thought out.

METHODS

- Must give sufficient detail on how the investigation was conducted. The detail should allow someone else or even yourself to repeat the investigation.
- Should be passive and in past tense
- Should be written in continuous *essay* format not point form
- Do not list the materials used separately, these should rather be reflected in the write up as you outline what was done
- Do not give unnecessary details and do not departure from the given instructions
- Include
 - . description of study site
 - . how the investigation was conducted
 - . variables measured
 - . variables to be computed and how this would be done, e.g. use of formulae

RESULTS

- This is the center piece of your report
- Shows a record of the data you have obtained through your experiment
- Synthesize and consolidate the raw data. Simply presenting raw data is not acceptable.
- Decide on the best way of presenting the synthesized data
- Do not present the same data in more than one way, e.g., in table and graph form.
- Each table must have

Writing About Biology:

SHORT GUIDE TO WRITING ABOUT BIOLOGY. JAN A. PECHENIK,2024 **A Short Guide to Writing about Biology** Jan A. Pechenik,2009-07-07 *A Short Guide to Writing about Biology* Jan A. Pechenik,2024-11-20 For almost four decades *A Short Guide to Writing About Biology* has been an indispensable resource. Noted biologist Jan Pechenik guides readers in acquiring the skills necessary to become critical thinkers and accomplished writers. Biology is a way of thinking about the world; it is also about communicating information accurately, logically, clearly, honestly, and concisely. The tenth edition outlines all aspects of writing well while also providing readers with procedures for developing strong research questions, logically explaining findings, and supporting claims with evidence. All good writing involves both a struggle for understanding and a struggle to express that understanding. The author delivers sage advice in an accessible, entertaining style to help readers learn to write compelling papers and to enhance their understanding. **Short Guide to Writing about Biology, a (Valuepack Item Only)** Jan A. Pechenik,2015-04-07 This best-selling writing guide teaches students to think as biologists and to express ideas clearly and concisely through their writing. **A Student Handbook for Writing in Biology** Karin Knisely,2009-04-10 Providing practical advice to students on how to write for biology, this book shows how to write for a particular audience, self-evaluate drafts, and paraphrase for improved comprehension. **Writing about Biology** Moore,1992-01-01 **Writing Programs Worldwide** Chris Thaiss, Gerd Bräuer,2012-07-30 **WRITING PROGRAMS WORLDWIDE** offers an important global perspective to the growing research literature in the shaping of writing programs. The authors of its program profiles show how innovators at a diverse range of universities on six continents have dealt creatively over many years with day-to-day and long-range issues affecting how students across disciplines and languages grow as communicators and learners. **Biological Science W/Short Guide to Writing about Biology** Freeman, Quillin, Allison,2015-01-01 *Guide to Writing Empirical Papers, Theses, and Dissertations* G. David Garson,2001-11-21 Describes the quantitative research process, framing analytical questions, developing a comprehensive outline, providing a roadmap for the reader, and accessing indispensable computer and program tools. Supplies end-of-chapter checklists, extensive examples, and bibliographies. **Writing Assignments Across University Disciplines** Roger Graves,2017-12-07 *Writing Assignments Across the University Curriculum* as a whole asks and answers these questions: What kinds of documents do students write in a wide range of university degree programs in Canada? How do instructors structure those writing assignments? That is, who is the audience for the assignments? Do students get formative feedback as they develop their documents? Do the patterns we found in a small liberal arts college (Graves, Hyland, and Samuels, 2010) occur in other kinds of universities? We took our cue from an article by Anson and Dannels (2009) who pointed us toward the idea that students experience a curriculum through their degree progress in an academic program. Consequently, we needed to map the writing assignments according to how different departments organized these degree programs. Results that were

organized by curricular unit departments faculties or colleges or programs units were more significant than general statistics because students would progress through these courses to a degree Several chapters in the book describe how this kind of curricular mapping provided a spark for curricular reform in Engineering Education and an entire small university The last two chapters report on the instructors perspective on their assignments what they were intending to do and why they both resisted and engaged in curricular discussions
