The Tatons Orb:

The Taton's Orb Roy Henkel,2001-04-30 To both his and Brak s surprise the stone glowed brightly for an instance and Brak abruptly halted his advance Eyes wide in fear Urak stared confusingly at Brak His adversary froze into a zombie like state his eyes filled with indescribable terror Urak still holding the stone curiously waved his hand in front of Brak s face Receiving no response and recognizing an opportunity to ensure his own survival Urak withdrew his short dagger from its sheath and plunged it into Brak s belly The dagger penetrated the yellowish skin without resistance and Brak fell dead to the floor with only a quiet moan escaping his lips The stone pulsed brightly at the deed and Urak experienced a sense of power flowing through his limbs He had never before experienced such satisfaction At that moment he realized that he had a weapon whose secret would gain him the power that he had always craved This secret would assure his rise to chieftain of the clans

The Man in the Moone Francis Godwin,2009-08-14 Arguably the first work of science fiction in English Francis Godwin s The Man in the Moone was published in 1638 pseudonymously and posthumously The novel which tells the story of Domingo Gonsales a Spaniard who flies to the moon by geese power and encounters an advanced lunar civilization had an enormous impact on the European imagination for centuries after its initial publication With its discussion of advanced ideas about astronomy and cosmology the novel is an important example of both popular fiction and scientific speculation This Broadview Edition includes a critical introduction that places the text in its scientific and historical contexts The rich selection of appendices includes related writings by Godwin and his predecessors and contemporaries on magnetism human flight voyages to real and unreal lands and the possibility of extra terrestrial life

The Science of Pleasure Harvie Ferguson,2005-09-29 In this rich and original work the author argues that science is the highest expression of bourgeois thought and whilst it may have liberated mankind it has also devised new forms of repression discipline and control

S. Brenner,1991 This engaging and intelligent book argues that the unbridled impact of deregulated market forces will lead to social polarization and ultimately to the destruction of capitalist society as we know it today After providing a lucid and accessible overview of the development of capitalism Professor Brenner explains how human greed was confined within legal boundaries and shows how ingenuity rather than brute force ultimately became the source of wealth He explores the interaction between ideas behaviour and economic change and points out comparisons between scientific ideas and the phases of economic development He warns that by an inner logic deregulated capitalism must necessarily lead to increased inequality and to the waning of those elements in bourgeois culture which are necessary for the proper functioning of a technologically advanced industrial economy Written in a lively and non technical style the book will appeal not only to economists but also to other social scientists and historians concerned with the history and development of modern capitalist society **Astronomy from Kepler to Newton** Curtis Wilson,1989 For long it has been accepted that Kepler proved three empirical laws of planetary motion and that Newton depended upon these in establishing his law of universal gravitation As Professor Wilson demonstrates the truth is more complicated but more interesting The question of observational evidence therefore forms the theme of this volume The first articles trace the evolution of Kepler s ideas and reconstruct the steps in his journey Their conclusion is that observational error inevitably prevented any satisfactory direct verification of Kepler s first law so as Kepler himself recognised his results rested upon hypothesis The final articles present a similar study of Newton s thoughts on gravitation and planetary motion again as Newton left it the theory he propounded can be considered no more or less than a hypothesis In between Professor Wilson examines the attitudes of mid 17th century astronomers to Kepler s ideas and in particular the achievements of Jeremiah Horrocks he died in 1640 at the age of only twenty two but his improvements in Keplerian astronomy were of great importance for Newton s future work **Taxonomic Literature** Frans Antonie Stafleu,1981 **Epic Moon** William Sheehan,Thomas A.
