

4. Results and discussion

4.1. System analysis

This study engaged system analysis to collect information regarding needs of database system development of medicinal plants. An analysis was conducted to model a running business process and thus proposing a new one. The model uses context diagram model as in shown in Figure 1.

Figure 1. Context diagram of system proposed

From the Figure 1, this study formulated three functional system requirements, i.e.:

1. **Administrator:** an operator whose role is to input data from expert into descriptions of medicinal plants, not to modify the data of medicinal plant.
2. **Contributor:** Public who can register and log into the system to add and modify the data of medicinal plants
3. **Expert:** specialists and practitioners of medicinal plants registered by the administrator to add and modify the data of medicinal plants.

Furthermore, the previous functional were then elaborated into five functions which are related to system users (actor). The system is accessed by three actors, i.e. administrator, contributor, and expert. Every actor needs to log into the system before using it. The following Figure 2 displays the designed use case diagram.

Layout Optimization in VLSI Design Bing Lu, Ding-Zhu Du, S. Sapatnekar, 2013-06-29 Introduction The exponential scaling of feature sizes in semiconductor technologies has side effects on layout optimization related to effects such as inter connect delay noise and crosstalk signal integrity parasitics effects and power dissipation that invalidate the assumptions that form the basis of previous design methodologies and tools This book is intended to sample the most important contemporary and advanced layout optimization problems emerging with the advent of very deep submicron technologies in semiconductor processing We hope that it will stimulate more people to perform research that leads to advances in the design and development of more efficient effective and elegant algorithms and design tools Organization of the Book The book is organized as follows A multi stage simulated annealing algorithm that integrates floorplanning and interconnect planning is presented in Chapter 1 To reduce the run time different interconnect planning approaches are applied in different ranges of temperatures Chapter 2 introduces a new design methodology the interconnect centric design methodology and its centerpiece interconnect planning which consists of physical hierarchy generation floorplanning with interconnect planning and interconnect architecture planning Chapter 3 investigates a net cut minimization based placement tool Dragon which integrates the state of the art partitioning and placement techniques
