study of the phenomenon of self wounding as it is represented in early modern literature It looks at depictions of self injury in ballads plays medical texts and histories from the 1580s to the turn of the eighteenth century In this period it argues self injury was not necessarily viewed as indicative of psychological distress as it is in modern discourses of self harm Rather self wounding might work as a form of protest a persuasive tactic a means of self regulation or an assertion of agency over one's own body This book blends traditional literary studies methodologies with insights from sociology emotion studies cognitive psychology and practice led research to shed new light on early modern ideas about rhetoric authenticity emotion and the relationship between body and identity The book also confronts the difficulties of examining such topical phenomena Can the anachronism of comparisons between modern and historical self injury be made productive rather than reductive What does it mean to talk about self injury in a period which did not have a distinct word for these practices In so doing it suggests new directions for literary historical studies of the body and its practices arguing that in such cases we should seek not to familiarise the past but to defamiliarize the present
