Childhood Language Disorders in Context Nickola Nelson, 1993. Here is a comprehensive introduction to language disorders in children, one whose two-fold developmental contextual perspective acknowledges that children's language learning systems include not only their skills, knowledge, and biological abilities but also their language background, family settings, and the context in which they are attempting to learn language. The text's primary focus is on perspectives from normal development, and the bulk of the coverage is devoted to examination of expectations for early infant through toddler, middle preschool through early elementary, and later middle elementary through adolescent stages of learning language. These developmentally geared divisions are then used to guide discussions of language assessment and intervention for children who are not learning language normally yet who have characteristics in common with their peers who are.

Treatment Protocols for Language Disorders in Children, Volume II Hegde, M.N., 2005-11-01. Contains protocols for basic language skills most children with language disorder need to be taught in the initial stages of treatment. The protocols give scripted scenarios for teaching most of the bound morphemes of English that children with language disorder typically lack. These include basic words, regular and irregular plurals, possessive, present progressive, prepositions, pronouns, auxiliaries, and copula, regular and irregular past tense, articles, conjunctions, adverbs, regular third person singular. For each target skill, 20 exemplars are available for the clinician to base rate, treat, and probe for generalized production. Most children can be advanced to relatively complex social communication skill level training only when they have mastered the basic morphologic features.
