The background of the page is a reproduction of the painting 'Rain, Steam, and Great Central Railway' by the English Romantic painter J.M.W. Turner. The painting depicts a steam locomotive crossing a railway bridge over a line that curves through a lush, green landscape. The scene is characterized by soft, hazy light and visible rain, with a large, dark tree on the left and rolling hills in the distance. The overall mood is atmospheric and captures a moment of daily life in the early industrial revolution.

## Sunlit Hours:

**The Sunlit Hours** Emile Verhaeren, 2021-05-19 Emile Verhaeren's *The Sunlit Hours* encapsulates the essence of modernist poetry through its vibrant imagery and evocative themes. With an emphasis on nature and the fleeting beauty of existence, Verhaeren employs a lyrical style that interweaves personal introspection with a broader commentary on the human condition. The work reflects the author's fascination with light and color, emphasizing the transitory moments in life. Set against the backdrop of the burgeoning industrial age, Verhaeren's poetry resonates with both the despair and the wonder of modern experience, inviting readers to embrace the juxtaposition of the ephemeral and the eternal.

Emile Verhaeren (1855-1916) was a Belgian poet whose upbringing in the picturesque countryside significantly influenced his literary imagination. His exposure to the dynamic changes brought on by industrialization fueled his exploration of nature's beauty alongside the disquieting aspects of modern life. A contemporary of other prominent poets such as Stéphane Mallarmé and Paul Verlaine, Verhaeren's work is ushered into the literary conversation of a rapidly evolving world, reflecting both personal and collective struggles to find meaning. I highly recommend *The Sunlit Hours* to those who appreciate rich descriptive poetry that stimulates the senses and provokes profound thought. With its exploration of light, existence, and the essence of time, this collection serves as a poignant reminder to take stock of the fleeting beauty that surrounds us, making it an essential read for both poetry enthusiasts and those captivated by modernist themes.

An increasing all-time low because of the anthropogenically induced ozone depletion and relevant increase of the surface ultraviolet (UV) radiation, including erythemal part of the UV spectrum, has resulted in the growth of interest in total ozone (TOZ) surface and satellite observations, surface UV measurements, with an emphasis on UV-B, and the interpretation of observation results to assess potential impacts of the UV radiation enhancement on man and biosphere. The significance of this phenomenon is different in various countries. Special attention has been paid, for instance, to ozone depletion and UV radiation increase at high latitudes; this problem has

also been discussed during the Workshop It is equally clear however that low and mid latitude environmental dynamics requires careful monitoring and assessment of environmental trends as well Such a conclusion is especially true for the Mediterranean Region where numerous resort places are located and subject to excessive levels of Solar Ultraviolet Radiation This is why the NATO Advanced Research Workshop Ground Level and Satellite Ozone Observations Changes in the Mediterranean Region was organized and took place in Athens Greece during the time period 31 October 4 November 1995 It should be pointed out however that presentations discussed during the Workshop went far beyond the regional scale of consideration This has been very important because it opened an opportunity to analyse the Mediterranean environmental situation in the broader context of the European global changes
