Jessica K. Sklar, Elizabeth S. Sklar, 2014-01-10 Mathematics has maintained a surprising presence in popular media for over a century In recent years the movies *Good Will Hunting* *A Beautiful Mind* and *Stand and Deliver* the stage plays *Breaking the Code* and *Proof* the novella *Flatland* and the hugely successful television crime series *NUMB3RS* all weave mathematics

prominently into their storylines Less obvious but pivotal references to the subject appear in the blockbuster TV show *Lost* the cult movie *The Princess Bride* and even Tolstoy's *War and Peace* In this collection of new essays contributors consider the role of math in everything from films baseball crossword puzzles fantasy role playing games and television shows to science fiction tales award winning plays and classic works of literature Revealing the broad range of intersections between mathematics and mainstream culture this collection demonstrates that even mass entertainment can have a hidden depth

Living on Earth Peter Godfrey-Smith, 2024-09-03 One of the Washington Post's 50 Best Nonfiction Books of 2024 The bestselling author of *Other Minds* shows how we and our ancestors have reinvented our planet If the history of the Earth were compressed down to a year our species would arise in the last thirty minutes or so of the final hour But life itself is not such a late arrival It has existed on Earth for something like 3.7 billion years most of our planet's history and over a quarter of the age of the universe as far as we can tell What have these organisms bacteria animals plants and the rest done in all this time In *Living on Earth* the philosopher Peter Godfrey-Smith proposes a new way of understanding how the actions of living beings have shaped our planet Where his acclaimed books *Other Minds* and *Metazoa* explored the riddle of how conscious minds came to exist on Earth *Living on Earth* turns to what happens when we look at the mind from another side when we come to see organisms as active causes not merely as results of the evolutionary process The planet we inhabit is significantly the work of other living beings who shaped the environments that we ourselves later transformed To that end Godfrey-Smith takes us on a grand tour of the history of life on earth He visits Rwandan gorillas and Australian bowerbirds returns to coral reefs and octopus dens considers the impact of language and writing and weighs the responsibilities our unique powers bring with them as they relate to factory farming habitat preservation climate change and the use of animals in experiments Ranging from the seas to the forests and from animate matter's first appearance to its future extinction Godfrey-Smith offers a novel picture of the course of life on Earth and how we might meet the challenges of our time the Anthropocene
