Alaska's wolves lost their fiercest advocate Gordon Haber when his research plane crashed in Denali National Park in 2009. Passionate, tenacious, and occasionally brash, Haber, a former hockey player and park ranger, devoted his life to Denali's wolves. He weathered brutal temperatures in the wild to document the wolves and provided exceptional insights into wolf behavior. Haber's writings and photographs reveal an astonishing degree of cooperation between wolf family members as they hunt, raise pups, and play social behaviors and traditions previously unknown. With the wolves at risk of being destroyed by hunting and trapping, his studies advocated for a balanced approach to wolf management. His fieldwork, registered as one of the longest studies in wildlife science, had a lasting impact on wolf policies. Haber's field notes, his extensive journals, and stories from friends all come together in *Among Wolves* to reveal much about both the wolves he studied and the researcher himself. Wolves continue to fascinate and polarize people, and Haber's work continues to resonate. *Dynamics of Caribou and Wolves in Denali National Park* Francis J. Singer, 1986. Study of possible causes of Denali caribou population decline including hunting, human disturbance, winter and spring severity, grizzly bear predation, wolf predation, and emigration.

A showcase of the extraordinary behaviour of outstanding fathers in the animal kingdom. From the emperor penguin who incubates the eggs of his young to the sea horse, the only male animal that gives birth to its young. Masson also examines nature's worst fathers: lions, bears, and humans. **The Wolves of Mount McKinley** Adolph Murie, 2011-12-01. In the time of Lewis and Clark, wolves were abundant throughout North America, from the Arctic regions to Mexico. But man declared war on this cunning and powerful animal when cattle replaced the buffalo on the western plains, reducing the wolf's range to those few areas in the Far North where economic necessity did not call for its extinction. Between 1939 and 1941, Adolph Murie, one of North America's greatest naturalists, made a field study of the relationship between wolves and Dall sheep in Mount McKinley National Park, since renamed Denali National Park, which has come to be respected as a classic work of natural history. In this study, Murie not only described the life cycle of Alaskan wolves in greater detail than has ever been done, but he discovered a great deal about the entire ecological network of predator and prey. The issues surrounding the survival of the wolf and its prey are more important today than ever, and Murie helps us understand the careful balance that must be maintained to ensure that these magnificent animals prosper.
