**XML Family of Specifications** Kenneth B. Sall, 2002 This single source reference and tutorial brings together up to the minute information about every key XML technology The book s unique features are designed to make XML easier than ever to master and use effectively Throughout Kenneth B Sall provides two parallel sets of examples QuickTrack examples for beginners and those seeking a quick overview of how the technology works and Advanced Track examples for readers who want to drill down for a more sophisticated understanding The book includes extensive tables designed for rapid access to key information plus as a Big Picture Map showing how virtually every key W3C XML related initiative fits together **KEY TOPICS** Sall begins by reviewing XML s history goals evolution fundamental concepts and syntax He covers parsing and programming APIs techniques for displaying and transforming XML related core XML specifications and specialized XML vocabularies Among the XML related technologies covered in this book XSL DOM P3P CSS Xlink and Xpointer The book includes a full chapter on XSLT by G Ken Holman current chair of the OASIS XSLT Conformance Technical Subcommittee and a full chapter on the Resource Definition Framework RDF by Ora Lassila a member of the W3C working group on RDF **MARKET** For every Web professional and software developer working with XML [Handbook on Architectures of Information Systems](#) Peter Bernus, 2006 An authoritative source about methods languages methodologies and supporting tools for constructing information systems that also provides examples for references models Its strength is the careful selection of each of the above mentioned components based on technical merit The second edition completely revises all articles and features new material on the latest developments in XML UML The structure follows the definition of the major components of Enterprise Integration as defined by GERAM Generalised Enterprise Reference Architecture and Methodology 1st edition sold about 600 copies since January 2003 *Visualizing Information Using SVG and X3D* Vladimir Geroimenko, Chaomei Chen, 2005-11-19 Correcting the Great Mistake People often mistake one thing for another That s human nature However one would expect the leaders in a particular field of endeavour to have superior abilities to discriminate among the developments within that field That is why it is so perplexing that the technology elite supposedly savvy folk such as software developers marketers and businessmen have continually mistaken Web based graphics for something it is not The first great graphics technology for the Web VRML has been mistaken for something else since its inception Viewed variously as a game system a format for architectural walkthroughs a platform for multi user chat and an augmentation of reality VRML may qualify as the least understood invention in the history of information technology Perhaps it is so because when VRML was originally introduced it was touted as a tool for putting the shopping malls of the world online at once prosaic and horrifyingly mundane to those of us who were developing it Perhaps those first two initials VR created expectations of sprawling photorealistic fantasy landscapes for exploration and play across the Web Or perhaps the magnitude of the invention was simply too great to be understood at the time by the many ironically even by those spending the money

to underwrite its development Regardless of the reasons VRML suffered in the mainstream as it was twisted to meet unintended ends and stretched far beyond its limitations *Visualizing the Semantic Web* Vladimir Geroimenko, Chaomei Chen, 2006-07-01 The Semantic Web is a vision that has sparked a wide ranging enthusiasm for a new generation of the Web The Semantic Web is happening The central idea of that vision is to make the Web more understandable to computer programs so that people can make more use of this gigantic asset The use of metadata data about data can clearly indicate the meaning of data on the Web so as to provide computers enough information to handle such data On the future Web many additional layers will be required if we want computer programs to handle the semantics the meaning of data properly without human intervention Such layers should deal with the hierarchical relationships between meanings their similarities and differences logical rules for making new inferences from the existing data and metadata and so on Dozens of new technologies have emerged recently to implement these ideas XML eXtensible Markup Language forms the foundation of the future Web RDF Resource Description Framework OWL Web Ontology Language and many other technologies help to erect a multistory building of the Semantic Web layer by layer by adding new features and new types of metadata According to Tim Berners Lee the inventor of the current Web and the Semantic Web it may take up to ten years to complete the building The new Web will be much more complex than the current one and will contain enormous amounts of metadata as well as data

**Process-Aware Information Systems** Marlon Dumas, Wil M. van der Aalst, Arthur H. ter Hofstede, 2005-09-28 A unifying foundation to design and implement process aware information systems This publication takes on the formidable task of establishing a unifying foundation and set of common underlying principles to effectively model design and implement process aware information systems Authored by leading authorities and pioneers in the field Process Aware Information Systems helps readers gain a thorough understanding of major concepts languages and techniques for building process aware applications including UML and EPCs two of the most widely used notations for business process modeling Concrete techniques for process design and analysis Process execution standards WfMC and BPEL Representative commercial tools ARIS TIBCO Staffware and FLOWer Each chapter begins with a description of the problem domain and then progressively unveils relevant concepts and techniques Examples and illustrations are used extensively to clarify and simplify complex material Each chapter ends with a set of exercises ranging from simple questions to thought provoking assignments Sample solutions for many of the exercises are available on the companion Web site Armed with a new and deeper understanding readers are better positioned to make their own contributions to the field and evaluate various approaches to a particular task or problem This publication is recommended as a textbook for graduate and advanced undergraduate students in computer science and information systems as well as for professionals involved in workflow and business process management groupware and teamwork enterprise application integration and business to business integration A Solutions Manual is available online An Instructor Support FTP site is also available [Selected Readings on Information Technology](#)
