Sun From Space:

The Sun from Space Kenneth R. Lang, 2013-04-18 Our familiar but often inscrutable star exhibits a variety of enigmatic phenomena that have continued to defy explanation Our book begins with a brief account of these unsolved mysteries Scientists could not for example understand how the Sun's intense magnetism is concentrated into dark sunspots that are as large as the Earth and thousands of times more magnetic Nor did they know exactly how the magnetic fields are generated within the Sun for no one could look inside it Another long standing mystery is the million degree solar atmosphere or corona that lies just above the cooler visible solar disk or photosphere Heat should not emanate from a cold object to a hotter one anymore than water should flow up hill Researchers have hunted for the elusive coronal heating mechanism for more than half a century The Sun's hot and stormy atmosphere is continuously expanding in all directions creating a relentless solar wind that seems to blow forever The exact sources of the wind's components and the mechanisms of its acceleration to supersonic velocities also remained perplexing problems The relatively calm solar atmosphere can be violently disrupted by powerful explosions filling the solar system with radio waves X rays and gamma rays and hurling charged particles out into space at nearly the speed of light

Physics of Space: Growth Points and Problems Nicole Meyer-Vernet, Michel Moncuquet, Filippo Pantellini, 2001-11-30 This book contains the Proceedings of the second Rencontres de l'Observatoire devoted to Physics of Space Growth Points and Problems held at the Paris Observatory at Meudon on January 10-14 2000 The last quarter of the century has seen the vertiginous growth of space achievements and the exploration of much of the heliosphere with beautifully instrumented space probes Even though the heliosphere is merely one particular cosmic environment it is

presently the only one accessible to in situ measurements and hence plays a unique role as a natural laboratory for physics and astrophysics In this spirit the conference highlighted recent achievements which have changed our view of the physics of space with emphasis on the bridges between space plasma physics and other disciplines The contributions include the physics of collisionless plasmas in particular particle acceleration and dissipation dusty plasmas cosmic winds and jets the environments of planetary bodies and pulsars novel space detection techniques and some landmarks of space physics history and possible futures

Space Fluid Hydromechanics V.H. Thomas,2022-08-15 Space Fluid Hydromechanics is an original research treatise dealing with the nature of presently debated or unknown phenomena in the universe Theories advanced Space is filled with a fluid of essentially zero viscosity This fluid is structured in filaments not discrete particles This structure is seen from the microscopic to the telescopic Nebulae seen in the night sky are not universes of billions of suns but are seen by reflected sunlight This also applies to the Milky Way The mechanics of this space fluid not only accounts for the physical world we see but also for the phenomena of electricity magnetism light heat and pressure These phenomena are characteristics of the Earth s space field The indicated space pressure near the Earth is in the vicinity of one hundred billion pounds per square inch There is only one source of available energy and this source is differential space pressure There exists electrodynamic space fields in size from a single cell to planetary nebulae An atomic blast creates an instantaneous space field The Earth s space field has optical properties We can never know with exactness the size position or distance of any object in space until these factors are applied The true nature of the red shift is primarily due to light being refracted by the Earth s space field A constantly compensating equilibrium is maintained among all the objects in the solar system The calamitous misinterpretation of the Michelson-EPR-Morley experiment The real interpretation The factors that make the Sun hot make the Earth relatively warm The surface of the Earth would be frozen at hundreds of degrees below zero if the Earth s only source of heat was radiation from the Sun The objections to the currently supposed size of the universe and the distances to celestial objects Why there is the spectrum displacement toward the red There is no positive evidence that any object seen in space is a Sun similar to our own or a collector of suns He mentions possible exceptions The probable anatomy of what we see in space is shown in figure 164
