Complexity Thinking

## Complexity Thinking Guidelines

1. Address complexity with complexity
2. Use a diversity of perspectives
3. Assume subjectivity and coevolution
4. Steal and tweak
5. Expect dependence on context
6. Anticipate, explore, adapt
7. Shorten the feedback cycle
8. Keep your options open

An organization is a complex adaptive system (CAS), because it consists of parts (people) that form a system (organization), which shows complex behavior while it keeps adapting to a changing environment.

Faced with complexity, the traditional instinct of the practical manager has been to try to reduce the complexity through rules of thumb, standard operating procedures, and so on.
— Hugo Letiche, Coherence in the Midst of Complexity

Example of typical mistake: Trying to control the future rather than discovering it.

You cannot control a complex system, but you have many options for guiding it.

Example of typical mistake: Thinking about numbers and not about people.

disciplinary approach advocated here will be trans disciplinary in two ways firstly by going beyond the separate disciplines within the fields of both natural sciences and social sciences and secondly by going beyond the separate cultures of the natural sciences and of the social sciences and humanities *Clinical Reasoning in the Health Professions E-Book* Joy Higgs,Gail M.
