Space Exploration Popular Prakashan,2004 *Wanderers in Space* Kenneth R. Lang,Charles A. Whitney,1991-03-21

How were the features on the Moon created What is the evidence for past or future life on Mars What might cause the Earth to become as hot and steamy as Venus Why do some say that a colliding asteroid wiped out the dinosaurs 65 million years ago From the earliest of times the human race has pondered upon the nature of the Heavens The moons and planets have changed from mere points of light to fascinating diverse worlds Spacecraft have visited all the planets known to ancient people Human beings have visited the Moon and robot spacecraft have landed on Venus and Mars This book presents the result of this captivating voyage of discovery recording more than two decades of extraordinary accomplishments The voyage starts with the still silent and lifeless Moon Then on to the contrasting world of Mars with its towering volcanoes and deep canyons The exploration continues across asteroid belts and icy comets to the outer planets where Voyager II revealed cyclonic storms liquid hydrogen and helium rain and the beautiful pink and blue dynamic world of Neptune This book includes numerous photos from spacecraft as well as a few works of modern art They provide the best available metaphors and images of the previously invisible worlds **NASA 50th Anniversary Proceedings: NASA's First 50 Years:**

Historical Perspectives Steven J. Dick,National Aeronautics and Space Administration,2010-07-07 On 29 July 1958

President Dwight D Eisenhower signed the National Aeronautics and Space Act creating the National Aeronautics and Space Administration NASA which became operational on 1 October of that year Over the next 50 years NASA achieved a set of spectacular feats ranging from advancing the well established field of aeronautics to pioneering the new fields of Earth and space science and human spaceflight In the midst of the geopolitical context of the Cold War 12 Americans walked on the Moon arriving in peace for all mankind Humans saw their home planet from a new perspective with unforgettable Apollo images of Earthrise and the Blue Marble as well as the pale blue dot from the edge of the solar system A flotilla of spacecraft has studied Earth while other spacecraft have probed the depths of the solar system and the universe beyond In the 1980s the evolution of aeronautics gave us the first winged human spacecraft the Space Shuttle and the International Space Station stands as a symbol of human cooperation in space as well as a possible way station to the stars With the Apollo fire and two Space Shuttle accidents NASA has also seen the depths of tragedy In this volume a wide array of scholars turn a critical eye toward NASA s first 50 years probing an institution widely seen as the premier agency for exploration in the world carrying on a long tradition of exploration by the United States and the human species in general Fifty years after its founding NASA finds itself at a crossroads that historical perspectives can only help to illuminate [Space Exploration—A History in 100 Objects](#) Sten Odenwald,2019-11-01 This is no ordinary space book Within the pages of this eclectic pop history scientist and educator Sten Odenwald at NASA examines 100 objects that forever altered what we know and how we think about the cosmos From Sputnik to Skylab and Galileo s telescope to the Curiosity rover some objects are iconic and some obscure but

all are utterly important The Nebra sky disk 1600 BCE features the first realistic depiction of the Sun Moon and stars The Lunar Laser Ranging RetroReflector finally showed us how far we are from the Moon in 1969 In 1986 it was the humble rubber O ring that doomed the space shuttle Challenger The Event Horizon Telescope gave us our first glimpse of a black hole in 2019 These 100 objects as Odenwald puts it showcase the workhorse tools and game changing technologies that have altered the course of space history the tools and devices that taken together represent the major scientific discoveries and celebrate the human ingenuity of space technology showing the ways physics and engineering have brought about our greatest leaps in understanding the way our universe works They make it clear that we have made giant strides in our quest to search ever more deeply into the farthest reaches of the universe and behind each new discovery is an object that expands our appreciation of space as well as the boundless imagination and resourcefulness we carry within us *A Brief Illustrated History of Space Exploration* Robert Snedden,2017-01-01 A Brief Illustrated History of Space Exploration charts the history of space exploration and discovery all the way through from the early rocketeers through the first people in space and the Space Race to be first to reach the Moon the first Space Stations and all the way through to the incredible findings of today With stunning full color images and illustrations this beautiful book is sure to fascinate and charm the young reader
