Space Frontier:

The Politics of Space Eligar Sadeh, 2010-11 This title provides a concise guide to the way in which politics and space exploration interact

Space and Astronomy Kyle Kirkland, 2010 Frontiers of Science is an eight volume set that explores notable issues at the forefront of scientific research and inquiry The interdisciplinary set focuses on the methods and imagination of people who push the boundaries of science by investigating subjects not readily observable or shrouded in obscurity Understanding the science behind scientific advances is critical because new knowledge and theories sometimes seem unbelievable until the underlying methods leading to their discovery become clear Designed to complement science curricula the set covers a broad range of complex relevant topics that will extend the limits of knowledge and satisfy the curiosity of readers Space and Astronomy investigates the research and discoveries of scientists who explored the frontiers of space and astronomy and found significant objects and environments that no one had ever seen before from Earth The book presents not only basic concepts relating to space and astronomy but also the impact that the field has on the future of technology research and exploration Each chapter traces the evolution of a prominent topic concerning space and astronomy and offers an introduction a conclusion a chronology and a list of resources that allow the reader to focus on the subject being considered The volume includes information on dark matter and dark energy extrasolar planets galaxy formation and evolution gravitational waves interstellar travel space colonization The book contains more than 40 color photographs and line illustrations sidebars a glossary a detailed list of additional print and Internet resources and an index Frontiers of Science is essential for high school students teachers and general readers who wish to understand the newest areas of scientific research from groundbreaking issues that are making headlines to ones that are not as well known Book jacket

Property Rights in Outer Space Matthew Johnson, 2024-05-28 This book explores the role of private mining rights in the utopian imaginary of space colonisation It presents a transdisciplinary account of the new and evolving legislative frameworks that have been established in anticipation of commercial exploitation of the mineral resources of the off world frontier Written in an engaging style the book investigates a novel case study in the history of capitalism and the commons the emergence of a nascent space mining industry undergirded by a contentious legislative framework In 2015 the US passed laws that would recognise the claims of US corporations to own and sell space resources This unilateral act of pre-emptive law making would appear to contravene the terms of the UN Outer Space Treaty 1967 which declared that the exploration and use of outer space should be for the benefit of all mankind and not subject to national appropriation Using this central dynamic between privately held mining rights and outer space as a global commons Matthew Johnson constructs an historical sociology of space mining from the deep historical roots of common and private property to the contemporary networks of neoliberalism that have engaged with the commercialisation of space activity The anticipatory expansion of

private property claims beyond the Earth both resonates with and problematises the terrain of political history such as the tensions between states and markets public law and private power the commons and exclusive property The emerging cosmopolitics of off world private property mirrors and is often explicitly embedded within neoliberal geopolitics prompting urgent questions about how we can reaffirm principles of democracy and common heritage in the international laws of Earth and space This book is compelling reading for anyone interested in the social study of space law economics technology politics and property rights
