**Spacetime Without Reference Frames** Tamás Matolcsi,1993      **Spacetime Without Reference Frames** Tamas Matolcsi,2020-02-12 In this book nonrelativistic spacetime and special relativistic spacetime are modelled by a four dimensional affine space endowed with further structures among which the fundamental ones distinguishing between them are absolute time and absolute light propagation respectively In both cases the same mathematically well defined notions are introduced observer and its space synchronization and its time reference frame splitting of spacetime by a reference frame into synchronization time and observer space splitting of classical fields into timelike and spacelike components Coordinate systems which form a starting point of the usual treatments and are intuitive notions there get mathematically exact and clear definition here Transformation rules regarded as postulates there are assertions here The book contains lots of examples with detailed calculations which help the reader to see how these models work and it calls attention to some significant errors arising from the traditional way of thinking in terms of coordinates The symmetry groups of spacetime the Noether group and the Poincar group respectively are also treated in these models The mathematics involved is fairly simple and is summarized in the second part of the book      [Common Sense Relativity and Spacetime](#) Tamás Matolcsi,2026-03-09 Based on simple common sense observations the author introduces spacetime in an easily understandable way Concepts in and around spacetime are explained first independently of any kind of relativity connotation then in the nonrelativistic context and finally in the special relativistic context Reference frames while traditionally foundational make reasoning about spacetime unnecessarily particular Thinking in terms of spacetime itself makes us much more confident and creative and this carries over to other branches of physics as spacetime is the stage where physics happens The consistent mathematical formalism of the textbook is as simple as possible and close to the everyday practice of physicists It helps readers realize that precise mathematical formulation avoids paradoxes and in general it is a valuable guide towards the better understanding of Nature      *19th Natural Philosophy Alliance Proceedings* Greg Volk,2012-07-14 The Natural Philosophy Alliance NPA sponsors regular international conferences for presenting high quality papers discussing aspects of philosophy in the sciences Many papers offer challenges to accepted orthodoxy in the sciences especially in physics Everything from the micro physics of quantum mechanics to the macro physics of cosmology is entertained Though the main interest of the NPA is in challenging orthodoxy in the sciences it will also feature papers defending such orthodoxy Our ultimate propose is to enable participants to articulate their own understanding of the truth All papers are reviewed by society officers and sometimes by other members before presentation in conferences and they are edit sometimes very significantly prior to publication in the Proceedings of the NPA      **Scientific Legacy Of Professor Zbigniew Oziewicz: Selected Papers From The International Conference "Applied Category Theory Graph-operad-logic"** Hilda Maria Colin Garcia,Jose De Jesus Cruz Guzman,Louis H Kauffman,Hanna Makaruk,2023-09-27 Dedicated to the memory of the late Professor Zbigniew Oziewicz

from Universidad Nacional Autónoma de México the book consists of papers on a wide variety of topics related to the work of Professor Oziewicz which were presented at the special conference on Graph Operads Logic GOL 2021 selected through peer review to promote his scientific legacy Professor Oziewicz was a great enthusiast and supporter of category theory and its applications in physics as well as in various areas of mathematics topology noncommutative geometry etc In particular he made significant contributions to the theory of Frobenius algebras which now are becoming more important due to their connection with topological quantum field theories that are used in mathematical physics and in quantum topology Professor Oziewicz was a great and very generous teacher who immersed his students in the beautiful ideas of category theory as well as mathematical physics and computation It was his idea to start a series of conferences under the title Graphs Operads Logic most of them held in Mexico with some of them in the USA which were a great platform to discuss various ideas connected with category theory and its various applications and to make friends with other scientists Despite his passing the GOL 2021 conference is included in this series to pay tribute to his many contributions to diverse areas of science The book is laid out in twelve main topics where we can find relevant works from distinguished experts **Nature as Sacred Ground**

Donald A. Crosby, 2015-08-04 Provides a metaphysical outlook for religious naturalism Nature as Sacred Ground explores a metaphysics for religious naturalism Donald A Crosby discusses major aspects of reality implicit in his ongoing explication of Religion of Nature a religious outlook that holds the natural world to be only world one with no supernatural domains presences or powers behind it Nature as thus envisioned is far more than just a system of facts and factual relations It also has profoundly important valuative dimensions including what Crosby regards as nature's intrinsically sacred value The search for comprehensive metaphysical clarity and understanding is a substantial part of this work's undertaking Yet this endeavor also reminds us that while it is good to think deeply and systematically about major features of reality and their relations to one another we also need to reflect tirelessly about how to respond to metaphysical concepts that call for decision and action

Moore, 2012-12-10 A General Relativity Workbook is a textbook intended to support a one semester upper division undergraduate course on general relativity General relativity which lies at the heart of contemporary physics has recently become the focus of a number of lively theoretical experimental and computational research programs As a result undergraduates have become increasingly excited to learn about the subject A General Relativity Workbook is a textbook intended to support a one semester upper division undergraduate course on general relativity Through its unique workbook based design it enables students to develop a solid mastery of both the physics and the supporting tensor calculus by pushing and guiding them to work through the implications Each chapter which is designed to correspond to one class session involves a short overview of the concepts without obscuring derivations

or details followed by a series of boxes that guide students through the process of working things out for themselves This active learning approach enables students to develop a more secure mastery of the material than more traditional approaches More than 350 homework problems support further learning This book more strongly emphasizes the physics than many of its competitors and while it provides students a full grounding in the supporting mathematics unlike certain other competitors it introduces the mathematics gradually and in a completely physical context

**Exploring Black Holes** Edwin F. Taylor, John Archibald Wheeler, 2000 The metric helps to answer every scientific question about nonquantum features of spacetime surrounding a black hole every possible question about trajectories of light and satellites around the black hole as well as around more familiar centers of attraction such as Earth and Sun The metric for a rotating black hole may tell us about quasars the most powerful steady energy sources in the Universe The black hole metric brings preliminary insights about the history and structure of the Cosmos Using the metric requires only algebra elementary differential calculus and a handful of integrals This modest mathematics opens the subject to the interested person and paves the way to a deeper study of general relativity for one who will discover new truth about this strange and beautiful Universe our home
