## **State Of Food Insecurity In The World 2003:**

**The State of Food Insecurity in the World 2003**, 2003-01-01 This fifth edition of *The State of Food Insecurity in the World* details recent trends in developing countries and countries in transition. It also offers an analysis of factors that have contributed to progress and setbacks in efforts to reach the World Food Summit goal Food and Human Rights in Development. Wenche Barth Eide, 2005. The right to adequate food is firmly established in international human rights law. It is among those most cited in solemn declarations and most violated in practice. In a landmark decision the 1996 World Food Summit decided to break with the all too familiar right to food rhetoric and requested a clarification of the content of the right to food and the fundamental right of everyone to be free from hunger and the means for its implementation. Since then much efforts have gone into further conceptualisation of social and cultural rights in general and the right to adequate food in particular. UN agencies, scholars, interested governments and civil society have joined forces in attempting to provide a foundation for national and international follow up of the recommendations of the World Food Summit reinforced by the Millennium Development Goals. This first of two volumes provides evidence of some of this work and gives direction for future activities to promote and protect the right to adequate food for all. It has contributions from some 15 authors who have all been directly involved from different angles in the advancement of the right to food and related human rights over the past years. Besides introducing the concept of the right to food and elaborating on its theoretical basis and meaning in development it provides several recent examples from work both at the national and international level to apply it in practical situations and with a special view to how to go about identifying the corresponding obligations of states and complementary duties and responsibilities of non state actors and international organisations. Finally several chapters address the right to food under special circumstances and for special groups needing particular attention. The book is the first of its kind on the right to food as a human right. It is not a textbook but is intended to inform and stimulate further debate among scholars, policy makers and practitioners and activists alike on some of the major issues of concern in applying a right based approach to alleviating food insecurity, hunger and malnutrition and in promoting access to and consumption of nutritionally adequate, safe and culturally acceptable food on a sustainable basis for all. It is now evident that with the current pace of events the goal set by the WFS and the MDG of halving poverty and hunger by 2015 will not be achieved. There is a growing need to watch some of the possible effects of rapid economic globalisation and market liberalisation on food and nutrition security conditions and to promote countervailing measures to offset their most negative consequences particularly for vulnerable groups. The right to food is a first test case of the extent to which the application of economic, social and cultural rights can effectively exert such counterforce in an increasingly economic and market driven international climate and enhance progress towards established goals. *Rich Christians in an Age of Hunger* Ronald J. Sider, 2005-04-10. Do you want to make a true difference in the world? Dr Ron Sider does. He has since before he first published *Rich Christians in an Age of Hunger*.

in 1978 Despite a dramatic reduction in world hunger since then 34 000 children still die daily of starvation and preventable disease and 1 3 billion people worldwide remain in abject poverty So the professor of theology went back to re-examine the issues by twenty-first century standards Finding that Conservatives blame morally reprehensible individual choices and Liberals blame constrictive social and economic policy Dr Sider finds himself agreeing with both sides In this new look at an age-old problem he offers not only a detailed explanation of the causes but also a comprehensive series of practical solutions in the hopes that Christians like him will choose to make a difference

The reader in two volumes examines key issues of food and nutrition security under the driving forces of globalization and urbanization The different sections and chapters present approaches to food security throughout the world in a historic as well as a systematic perspective The methods applied are both qualitative and quantitative two econometric models and one cluster analysis Although much has been written on food security a systematic treatment of a historical empirical and theoretical analytical view is a recent development and we have therefore chosen a holistic approach The first volume contains contributions of a more historical empirical nature the second volume is policy oriented Each volume is essentially self contained and can be read in its own right according to the reader's interest The current work builds on our 1999 volume
