Stationary Sequences And Random Fields:

Stationary Sequences and Random Fields Murray Rosenblatt, 1985-01-01 *Stationary Sequences and Random Fields* Murray Rosenblatt, 1985 *Gaussian and Non-Gaussian Linear Time Series and Random Fields* Murray Rosenblatt, 2000 The principal focus here is on autoregressive moving average models and analogous random fields with probabilistic and statistical questions also being discussed The book contrasts Gaussian models with noncausal or noninvertible nonminimum phase non Gaussian models and deals with problems of prediction and estimation New results for nonminimum phase non Gaussian processes are exposted and open questions are noted Intended as a text for gradutes in statistics mathematics engineering the natural sciences and economics the only recommendation is an initial background in probability theory and statistics Notes on background history and open problems are given at the end of the book An Introduction to the Theory of Stationary Random Functions A. M. Yaglom, 2004-01-01 This two part treatment covers the general theory of stationary random functions and the Wiener Kolmogorov theory of extrapolation and interpolation of random sequences and processes Beginning with the simplest concepts it covers the correlation function the ergodic theorem homogenous random fields and general rational spectral densities among other topics Numerous examples appear throughout the text with emphasis on the physical meaning of mathematical concepts Although rigorous in its treatment this is essentially an introduction and the sole prerequisites are a rudimentary knowledge of probability and complex variable theory 1962 edition Probability Theory and Mathematical Statistics B.
