Statistics for Social Data

Analysis David Knoke, George W. Bohrnstedt, Alisa Potter Mee, 2002 The fourth edition of STATISTICS FOR SOCIAL DATA ANALYSIS continues to show students how to apply statistical methods to answer research questions in various fields Throughout the text the authors underscore the importance of formulating substantive hypotheses before attempting to analyze quantitative data An important aspect of this text is its realistic hands on approach Actual datasets are used in most examples helping students understand and appreciate what goes into the research process The book focuses on the continuous discrete distinction in considering the level at which a variable is measured Rather than dwelling on the four conventional levels of measurement distinctions the authors discuss statistics for analyzing continuous and discrete variables separately and in combination

running the R code on their own as they work through contemporary political science and social science examples Author Thomas M Holbrook patiently explains each step in in the process avoiding overly complicated jargon and commands Exercises at the end of chapters feature both conceptual and calculation based questions so students can check their understanding of data analysis and practice using R At the end of the semester students can confidently add skills in data analysis with R to their resumes

Theory-Based Data Analysis for the Social Sciences Carol S. Aneshensel,2012-12-11 This book presents the elaboration model for the multivariate analysis of observational quantitative data This model entails the systematic introduction of third variables to the analysis of a focal relationship between one independent and one dependent variable to ascertain whether an inference of causality is justified Two complementary strategies are used an exclusionary strategy that rules out alternative explanations such as spuriousness and redundancy with competing theories and an inclusive strategy that connects the focal relationship to a network of other relationships including the hypothesized causal mechanisms linking the focal independent variable to the focal dependent variable The primary emphasis is on the translation of theory into a logical analytic strategy and the interpretation of results The elaboration model is applied with case studies drawn from newly published research that serve as prototypes for aligning theory and the data analytic plan used to test it these studies are drawn from a wide range of substantive topics in the social sciences such as emotion management in the workplace subjective age identification during the transition to adulthood and the relationship between religious and paranormal beliefs The second application of the elaboration model is in the form of original data analysis presented in two Analysis Journals that are integrated throughout the text and implement the full elaboration model Using real data not contrived examples the text provides a step by step guide through the process of
